Hypertension remains the leading cause of cardiovascular morbidity and mortality in spite of current medical therapies It has been estimated that 50% of Western civilization has hypertension and approximately 20% of patients have resistant hypertension Renal denervation RDN is a minimally invasive endovascular catheter based procedure using radiofrequency ablation aimed at treating resistant hypertension Early studies show a high degree of effectiveness in renal denervation to treat hypertension This book examines renal pathophysiology and the rationale for renal denervation as well as possible long term benefits and risks of this new therapy The myriad of devices involved in the evolution of this therapy are discussed and the book concludes with analyses of the cost effectiveness and future applications      *Toxicity Bibliography*, 1970      Reflex Control of the Circulation Irving H. Zucker, Joseph P. Gilmore, 2020-02-03 Reflex Control of the Circulation presents an interdisciplinary discussion of concepts in the reflex control of circulation This volume describes aspects of autonomic receptor physiology central pathways of reflex control the electrophysiology of cardiovascular afferents the interaction between reflexes the autonomic control of regional blood flows the autonomic control of fluid and electrolyte balance and neurohumoral control of the circulation through normal and pathological states e g hypertension congestive heart failure In addition the regulation of regional blood flow during exercise and developmental aspects of reflex control are examined Any researcher interested in the autonomic system and its role in circulation will find this book fascinating reading      **Surgery of the Autonomic Nervous System** Jonathan A. Hyam, Erlick A. C. Pereira, Alexander L. Green, 2016-04-14 Autonomic surgery is an important and expanding field within contemporary clinical practice Surgical therapies influencing the autonomic nervous system have historically entailed disabling various components of its network by injurious methods More sophisticated techniques have now emerged to allow modulation of neural function by electrical implants or by preservative surgery This has fuelled the expansion in this field as safer therapies with greater scope for patient benefit have become available As the potential for precise neural manipulation has advanced so has the number and diversity of diseases which have become amenable to such therapies This book reviews the basic science underpinning the autonomic control of various body systems and the state of the art clinical applications by which these systems are surgically modulated in patients today Clinical chapters include details of the procedure operative considerations outcomes adverse effect profile post operative management of such patients and reflections on personal experience Autonomic surgery can be applied to a wide variety of diseases affecting large numbers of the population such as angina pectoris hypertension orthostatic hypotension sexual

Lerma,Peter A. McCullough,2020-08-03 This book is the first title that focuses exclusively on kidney disease and its impact in the cardiac catheterization laboratory The increasing prevalence of vascular risk factors such as diabetes obesity and hypertension coupled with increased longevity has resulted in a worldwide epidemic of cardiovascular and chronic kidney disease CKD Never has the impact of one organ system on the other been so profound as in the current context of cardio renal interactions The cross talk between the heart and kidneys is highly relevant in the field of interventional cardiology given the increasing number of trans catheter procedures being performed in patients with underlying kidney disease These procedures also have a significant impact on kidney function and require thoughtful interdisciplinary planning by a cardiorenal team to achieve optimal outcomes This book assembles the collective expertise of several international leaders in the field of interventional cardiology and nephrology to summarize this complex interface The book is divided into seven sections to comprehensively cover the topic including sections on best practices with reduction of contrast associated acute kidney injury cutting edge techniques to minimize kidney risk with complex interventions impact of transcatheter valvular procedures on kidney function and the utility of cardio nephrology teams Less recognized complications with high morbidity such as athero embolic renal disease are featured prominently to increase awareness in the interventional cardiology and nephrology communities This book is a valuable resource for interventional and structural cardiologists general cardiologists and nephrologists dealing with the significant overlap areas between these two specialties It is also relevant to medical

students trainee physicians in nephrology and cardiology advanced care practitioners and nursing personnel in both specialties Given the major impact of kidney function on outcomes in patients undergoing cardiac procedures this textbook serves as a focal point to integrate relevant clinical data from both specialties and help interventional cardiologists achieve optimal outcomes especially in patients with or at risk for kidney disease     The Urologic and Cutaneous Review ,1925
