Symposia Mathematica Volume 1:

Symposia Mathematica ,1969 <u>Literature 1970, Part 1</u> Siegfried Böhme,Walter Fricke,Ulrich Güntzel-Lingner,Frieda Henn,Dietlinde Krahn,Gert Zech,2013-04-18 Astronomy and Astrophysics Abstracts which appears in semi annual volumes is devoted to the re cording summarizing and indexing of astronomical publications throughout the world It is prepared under the auspices of the International Astronomical Union according to a resolution adopted at the 14th General Assembly in 1970 Astronomy and Astrophysics Abstracts aims to present a comprehensive documentation of literature in all fields of astronomy and astrophysics Every effort will be made to ensure that the average time interval between the date of receipt of the original literature and publication of the abstracts will not exceed eight months This time interval is near to that achieved by monthly abstracting journals com pared to which our system of accumulating abstracts for about six months offers the advantage of greater convenience for the user Volume 3 contains literature published in 1970 and received before August IS 1970 some older lite rature which was received late and which is not recorded in earlier volumes is also included **Imprimitive Irreducible Modules for Finite Quasisimple Groups** Gerhard Hiss, William J. Husen,Kay Magaard,2015-02-06 Motivated by the maximal subgroup problem of the finite classical groups the authors begin the classification of imprimitive irreducible modules of finite quasisimple groups over algebraically closed fields K A module of a group G over K is imprimitive if it is induced from a module of a proper subgroup of G The authors obtain their strongest results when char K 0 although much of their analysis carries over into positive characteristic If G is a finite quasisimple group of Lie type they prove that an imprimitive irreducible KG module is Harish Chandra induced This being true for rm char K different from the defining characteristic of G the authors specialize to the case char K 0 and apply Harish Chandra philosophy to classify irreducible Harish Chandra induced modules in terms of Harish Chandra series as well as in terms of Lusztig series The authors determine the asymptotic proportion of the irreducible imprimitive KG modules when G runs through a series groups of fixed twisted Lie type One of the surprising outcomes of their investigations is the fact that these proportions tend to 1 if the Lie rank of the groups tends to infinity For exceptional groups G of Lie type of small rank and for sporadic groups G the authors determine all irreducible imprimitive KG modules for arbitrary characteristic of K *The q-theory of Finite Semigroups* John Rhodes,Benjamin Steinberg,2009-04-05 Discoveries in finite semigroups have influenced several mathematical fields including theoretical computer science tropical algebra via matrix theory with coefficients in semirings and other areas of modern algebra This comprehensive encyclopedic text will provide the reader from the graduate student to the researcher practitioner with a detailed understanding of modern finite semigroup theory focusing in particular on advanced topics on the cutting edge of research Key features 1 Develops q theory a new theory that provides a unifying approach to finite semigroup theory via quantization 2 Contains the only contemporary exposition of the complete theory of the complexity of finite semigroups 3 Introduces spectral theory into finite semigroup theory 4 Develops the theory of profinite semigroups

from first principles making connections with spectra of Boolean algebras of regular languages 5 Presents over 70 research problems most new and hundreds of exercises Additional features 1 For newcomers an appendix on elementary finite semigroup theory 2 Extensive bibliography and index The q theory of Finite Semigroups presents important techniques and results many for the first time in book form and thereby updates and modernizes the literature of semigroup theory

Geometric Quantization and Quantum Mechanics Jedrzej Sniatycki,2012-12-06 This book contains a revised and expanded version of the lecture notes of two seminar series given during the academic year 1976 77 at the Department of Mathematics and Statistics of the University of Calgary and in the summer of 1978 at the Institute of Theoretical Physics of the Technical University Clausthal The aim of the seminars was to present geometric quantization from the point of view of its applica tions to quantum mechanics and to introduce the quantum dynamics of various physical systems as the result of the geometric quantization of the classical dynamics of these systems The group representation aspects of geometric quantiza tion as well as proofs of the existence and the uniqueness of the introduced structures can be found in the expository papers of Blattner Kostant Sternberg and Wolf and also in the references quoted in these papers The books of Souriau 1970 and Simms and Woodhouse 1976 present the theory of geometric quantization and its relationship to quantum mech anics The purpose of the present book is to complement the preceding ones by including new developments of the theory and emphasizing the computations leading to results in quantum mechanics Topological and Bivariant K-Theory Joachim Cuntz,Jonathan Rosenberg,2007-07-19 Topological K theory is one of the most important invariants for noncommutative algebras Bott periodicity homotopy invariance and various long exact sequences distinguish it from algebraic K theory This book describes a bivariant K theory for bornological algebras which provides a vast generalization of topological K theory In addition it details other approaches to bivariant K theories for operator algebras The book studies a number of applications including K theory of crossed products the Baum Connes assembly map twisted K theory with some of its applications and some variants of the Atiyah Singer Index Theorem **Geometry and Topology of Submanifolds and Currents** Weiping Li,Shihshu Walter Wei,2015-08-25 he papers in this volume are mainly from the 2013 Midwest Geometry Conference held October 19 2013 at Oklahoma State University Stillwater OK and partly from the 2012 Midwest Geometry Conference held May 12 13 2012 at the University of Oklahoma Norman OK The papers cover recent results on geometry and topology of submanifolds On the topology side topics include Plateau problems Voevodsky s motivic cohomology Reidemeister zeta function and systolic inequality and freedom in 2 and 3 dimensional manifolds On the geometry side the authors discuss classifying isoparametric hypersurfaces and review Hartogs triangle finite volume flows nonexistence of stable p currents and a generalized Bernstein type problem The authors also show that the interaction between topology and geometry is a key to deeply understanding topological invariants and the geometric problems **Statistical Fluid Mechanics, Volume II** A. S. Monin,A. M. Yaglom,2013-07-25 If ever a field needed a definitive book it is the study of

turbulence if ever a book on turbulence could be called definitive it is this book Science Written by two of Russia s most eminent and productive scientists in turbulence oceanography and atmospheric physics this two volume survey is renowned for its clarity as well as its comprehensive treatment The first volume begins with an outline of laminar and turbulent flow The remainder of the book treats a variety of aspects of turbulence its statistical and Lagrangian descriptions shear flows near surfaces and free turbulence the behavior of thermally stratified media and diffusion Volume Two continues and concludes the presentation Topics include spectral functions homogeneous fields isotropic random fields isotropic turbulence self preservation hypotheses spectral energy transfer the Millionshchikov hypothesis acceleration fields equations for higher moments and the closure problem and turbulence in a compressible fluid Additional subjects include general concepts of the local structure of turbulence at high Reynolds numbers the theory of fully developed turbulence the propagation of electromagnetic and acoustic waves through a turbulent medium and the twinkling of stars The book closes with a discussion of the functional formulation of the problem of turbulence presenting the equations for the characteristic functional and methods for their solution **Forcing, Arithmetic, Division Rings** J. Hirschfeld,W.H. Wheeler,2006-11-15 **The Global Theory of Minimal Surfaces in Flat Spaces** William Meeks,A. Ros,H. Rosenberg,2002-03-25 In the second half of the twentieth century the global theory of minimal surface in flat space had an unexpected and rapid blossoming Some of the classical problems were solved and new classes of minimal surfaces found Minimal surfaces are now studied from several different viewpoints using methods and techniques from analysis real and complex topology and geometry In this lecture course Meeks Ros and Rosenberg three of the main architects of the modern edifice present some of the more recent methods and developments of the theory The topics include moduli asymptotic geometry and surfaces of constant mean curvature in the hyperbolic space **Rational Number Theory in the 20th Century** Władysław Narkiewicz,2011-09-02 The last one hundred years have seen many important achievements in the classical part of number theory After the proof of the Prime Number Theorem in 1896 a quick development of analytical tools led to the invention of various new methods like Brun s sieve method and the circle method of Hardy Littlewood and Ramanujan developments in topics such as prime and additive number theory and the solution of Fermat s problem Rational Number Theory in the 20th Century From PNT to FLT offers a short survey of 20th century developments in classical number theory documenting between the proof of the Prime Number Theorem and the proof of Fermat s Last Theorem The focus lays upon the part of number theory that deals with properties of integers and rational numbers Chapters are divided into five time periods which are then further divided into subject areas With the introduction of each new topic developments are followed through to the present day This book will appeal to graduate researchers and student in number theory however the presentation of main results without technicalities will make this accessible to anyone with an interest in the area *Category Theory And Applications: A Textbook For Beginners (Second Edition)* Marco Grandis,2021-03-05 Category Theory now permeates most of Mathematics large parts of

theoretical Computer Science and parts of theoretical Physics Its unifying power brings together different branches and leads to a better understanding of their roots This book is addressed to students and researchers of these fields and can be used as a text for a first course in Category Theory It covers the basic tools like universal properties limits adjoint functors and monads These are presented in a concrete way starting from examples and exercises taken from elementary Algebra Lattice Theory and Topology then developing the theory together with new exercises and applications A reader should have some elementary knowledge of these three subjects or at least two of them in order to be able to follow the main examples appreciate the unifying power of the categorical approach and discover the subterranean links brought to light and formalised by this perspective Applications of Category Theory form a vast and differentiated domain This book wants to present the basic applications in Algebra and Topology with a choice of more advanced ones based on the interests of the author References are given for applications in many other fields In this second edition the book has been entirely reviewed adding many applications and exercises All non obvious exercises have now a solution or a reference in the case of an advanced topic solutions are now collected in the last chapter *Homological Theory of Representations* Henning Krause,2021-11-18 This book for advanced graduate students and researchers discusses representations of associative algebras and their homological theory **Nonimaging Optics** Roland Winston,Lun Jiang,Vladimir Oliker,2020-10-07 This book provides a comprehensive look at the science methods designs and limitations of nonimaging optics It begins with an in depth discussion on thermodynamically efficient optical designs and how they improve the performance and cost effectiveness of solar concentrating and illumination systems It then moves into limits to concentration imaging devices and their limitations and the theory of furnaces and its applications to optical design Numerous design methods are discussed in detail followed by chapters of estimating the performance of a nonimaging design and pushing their limits of concentration Exercises and worked examples are included throughout Complex Analysis and Potential Theory Andre Boivin,Javad Mashreghi,2012 This is the proceedings volume of an international conference entitled Complex Analysis and Potential Theory which was held to honor the important contributions of two influential analysts Kohur N GowriSankaran and Paul M Gauthier in June 2011 at the Centre de Recherches Mathematiques CRM in Montreal More than fifty mathematicians from fifteen countries participated in the conference The twenty four surveys and research articles contained in this book are based on the lectures given by some of the most established specialists in the fields They reflect the wide breadth of research interests of the two honorees from potential theory on trees to approximation on Riemann surfaces from universality to inner and outer functions and the disc algebra from branching processes to harmonic extension and capacities from harmonic mappings and the Harnack principle to integration formulae in $\mathbb{C}^n$ and the Hartogs phenomenon from fine harmonicity and plurisubharmonic functions to the binomial identity and the Riemann hypothesis and more This volume will be a valuable resource for specialists young researchers and graduate students from both fields complex analysis and

potential theory It will foster further cooperation and the exchange of ideas and techniques to find new research perspectives

Information Theory Imre Csiszár,János Körner,2014-07-10 Information Theory Coding Theorems for Discrete Memoryless Systems presents mathematical models that involve independent random variables with finite range This three chapter text specifically describes the characteristic phenomena of information theory Chapter 1 deals with information measures in simple coding problems with emphasis on some formal properties of Shannon s information and the non block source coding Chapter 2 describes the properties and practical aspects of the two terminal systems This chapter also examines the noisy channel coding problem the computation of channel capacity and the arbitrarily varying channels Chapter 3 looks into the theory and practicality of multi terminal systems This book is intended primarily for graduate students and research workers in mathematics electrical engineering and computer science A Panoramic View of Riemannian Geometry Marcel Berger,2012-12-06 Riemannian geometry has today become a vast and important subject This new book of Marcel Berger sets out to introduce readers to most of the living topics of the field and convey them quickly to the main results known to date These results are stated without detailed proofs but the main ideas involved are described and motivated This enables the reader to obtain a sweeping panoramic view of almost the entirety of the field However since a Riemannian manifold is even initially a subtle object appealing to highly non natural concepts the first three chapters devote themselves to introducing the various concepts and tools of Riemannian geometry in the most natural and motivating way following in particular Gauss and Riemann **From Fourier Analysis and Number Theory to Radon Transforms and Geometry** Hershel M. Farkas,Robert C. Gunning,Marvin I. Knopp,B. A. Taylor,2012-09-18 A memorial conference for Leon Ehrenpreis was held at Temple University November 15 16 2010 In the spirit of Ehrenpreis s contribution to mathematics the papers in this volume written by prominent mathematicians represent the wide breadth of subjects that Ehrenpreis traversed in his career including partial differential equations combinatorics number theory complex analysis and a bit of applied mathematics With the exception of one survey article the papers in this volume are all new results in the various fields in which Ehrenpreis worked There are papers in pure analysis papers in number theory papers in what may be called applied mathematics such as population biology and parallel refractors and papers in partial differential equations The mature mathematician will find new mathematics and the advanced graduate student will find many new ideas to explore A biographical sketch of Leon Ehrenpreis by his daughter a professional journalist enhances the memorial tribute and gives the reader a glimpse into the life and career of a great mathematician *Integer Programming and Related Areas* Rabe v. Randow,2012-12-06 The fields of integer programming and combinatorial optimization continue to be areas of great vitality with an ever increasing number of publications and journals appearing A classified bibliography thus continues to be necessary and useful today even more so than it did when the project of which this is the fifth volume was started in 1970 in the Institut fur Okonometrie und Operations Research of the University of Bonn The pioneering first volume was compiled by

Claus Kastning during the years 1970 1975 and appeared in 1976 as Volume 128 of the series Lecture Notes in Economics and Mathematical Systems published by the Springer Verlag Work on the project was continued by Dirk Hausmann Reinhardt Euler and Rabe von Randow and resulted in the publication of the second third and fourth volumes in 1978 1982 and 1985 Volumes 160 197 and 243 of the above series The present book constitutes the fifth volume of the bibliography and covers the period from autumn 1984 to the end of 1987 It contains 5864 new publications by 4480 authors and was compiled by Rabe von Randow Its form is practically identical to that of the first four volumes some additions having been made to the subject list **Semidynamical Systems in Infinite Dimensional Spaces** Stephen H. Saperstone,2012-12-06 Where do solutions go and how do they behave en route These are two of the major questions addressed by the qualita tive theory of differential equations The purpose of this book is to answer these questions for certain classes of equa tions by recourse to the framework of semidynamical systems or topological dynamics as it is sometimes called This approach makes it possible to treat a seemingly broad range of equations from nonautonomous ordinary differential equa tions and partial differential equations to stochastic differ ential equations The methods are not limited to the examples presented here though The basic idea is this Embed some representation of the solutions of the equation and perhaps the equation itself in an appropriate function space This space serves as the phase space for the semidynamical system The phase map must be chosen so as to generate solutions to the equation from an initial value In most instances it is necessary to provide a weak topology on the phase space Typically the space is infinite dimensional These considerations motivate the requirement to study semidynamical systems in non locally compact spaces Our objective here is to present only those results needed for the kinds of applications one is likely to encounter in differen tial equations Additional properties and extensions of ab stract semidynamical systems are left as exercises The power of the semidynamical framework makes it possible to character Preface ize the asymptotic behavior of the solutions of such a wide class of equations
