

The book cover features a detailed, artistic illustration of a neuron. The cell body is a bright, glowing yellow-green, with several long, tapering dendrites and axons extending outwards in various directions. The background is a deep, dark blue, creating a high-contrast effect. The text is overlaid on the upper and central portions of the cover. A white rectangular box highlights the title and subtitle. A yellow ruler is placed vertically along the right edge of the book for scale.

## **Synaptic Self How Our Brains Become Who We Are:**

Synaptic Self Joseph LeDoux, 2003-01-28 In 1996 Joseph LeDoux's *The Emotional Brain* presented a revelatory examination of the biological bases of our emotions and memories. Now the world renowned expert on the brain has produced with a groundbreaking work that tells a more profound story how the little spaces between the neurons the brain's synapses are the channels through which we think act imagine feel and remember. Synapses encode the essence of personality enabling each of us to function as a distinctive integrated individual from moment to moment. Exploring the functioning of memory the synaptic basis of mental illness and drug addiction and the mechanism of self awareness *Synaptic Self* is a provocative and mind expanding work that is destined to become a classic.

**Synaptic Self** Joseph E. LeDoux, 2002 Joseph LeDoux believes that the synapses the little spaces between the neurons in our brains are the key to everything the brain does. They are the channels of communication by which we think act imagine feel and remember. But synapses do more. They also allow interactions between mental processes allowing us to remember the important stuff in life better than the trivial. What's more synapses encode the essence of the individual allowing us to be the same person from moment to moment week to week and year to year. In short the self is synaptic.

Synaptic Self Joseph LeDoux, 2003-01-28 Following up his 1996 *The Emotional Brain* the world renowned brain expert presents a groundbreaking work that tells a more profound story how the little spaces between the neurons the brain's synapses are the channels through which we think feel imagine act and remember.

**Born to Choose** John H Falk, 2017-09-05 *Born to Choose* is John H Falk's compelling account of why and how we make the endless set of choices we do every second of every day of our lives. Synthesizing research from across the biological and social sciences Falk argues that human choice making is an evolutionarily ancient and complex process. He suggests that all our choices are influenced by very basic and early evolving needs and that ultimately each choice is designed to support survival in the guise of perceived well being. This engaging book breaks new intellectual ground and enhances our understanding not just of human choice making but human behavior overall.

Architectural Theories of the Environment Arianne Lourie Harrison, 2013 These essays by architects theorists and sustainable designers together provide a framework to help you develop your own guidelines to approaching to your work. Introductions define key terms and nine case studies demonstrate the concepts.

*The Fiction of Our Lives* Sandra M. Levy-Achtemeier, 2016-11-10 We are the author of our own lives. We create re create and co create our stories over the lifetime we have been given in order to make something of ourselves in the process. Blending new findings from brain science and psychology with spiritual and theological insights Sandra Levy Achtemeier has written a readable work translating complex scientific and spiritual categories into practical terms that can inform our everyday selves. From our evolutionary roots that equip us to sing meaning into our living to the cultural menus we now draw from to script new meaning into our days she has given us an incredible wealth of wisdom to inform the rest of our life journeys. Underneath it all Levy Achtemeier makes the case that God's Spirit and call are

at the center of our story from our brain synapses to the historical circumstances that impinge on our lives      **Evolve Your Brain** Joe Dispenza, 2010-01-01 Why do we keep getting the same jobs taking on the same relationships and finding ourselves in the same emotional traps Dr Joe Dispenza not only teaches why people tend to repeat the same negative behaviors he shows how readers can release themselves from these patterns of disappointment With the dynamic combination of science and accessible how to Dispenza teaches how to use the most important tool in ones body and life the brain Featured in the underground smash hit of 2004 What the Bleep Do We Know Dispenza touched upon the brain s ability to become addicted to negative emotions Now in his empowering book Evolve Your Brain he explains how new thinking and new beliefs can literally rewire one s brain to change behavior emotional reactions and habit forming patterns Most people are unaware of how addicted they are to their emotions and how the brain perpetuates those addictions automatically In short we become slaves to our emotional addictions without even realizing it By observing our patterns of thought and learning how to re wire the brain with new thought patterns we can break the cycles that keep us trapped and open ourselves to new possibilities for growth happiness and emotional satisfaction Key Features A radical approach to changing addictive patterns and bad habits Based on more than twenty years of research Bridges the gap between science spirituality and self help a formula that has proven success Easy to understand and written for the average reader      *Illness and Literature in the Low Countries* Jaap Grave, Rick Honings, Bettina Noak, 2015-12-09 From as early as classical antiquity there has been an interplay between literature and medicine The first book of Homer s Ilias recounts the plague that swept the camp of the Achaeans While this instance concerns a full length book it is the aphorism that is of greater importance as a literary technique for the dissemination of medical knowledge from the Corpus Hippocraticum of antiquity until the Aphorismi de cognoscendis et curandis morbis 1715 by Herman Boerhaave In addition the subject of illness and its impact on mankind was explored by great numbers of poetic scholars and scholarly poets This collection offers fourteen articles which all highlight the relation between disease and literature It entails a first ever overview of Dutch language research in this field whereby the literary and cultural functions of medical knowledge and the poetics of medical and literary writing are in the focus      **Patience with God: Faith for People Who Don't Like Religion (or Atheism)** Frank Schaeffer, 2010-04 Frank Schaeffer has a problem with Dawkins Hitchens Harris Dennett and the rest of the New Atheists the self anointed Brights He also has a problem with the Rick Warrens and Tim LaHayes of the world The problem is that he doesn t see much of a difference between the two camps As Schaeffer puts it they often share the same fallacy truth claims that reek of false certainties I believe that there is an alternative that actually matches the way life is lived rather than how we usually talk about belief Sparing no one and nothing including himself and his fiery evangelical past and invoking subtleties too easily ignored by the pontificators Schaeffer adds much needed nuance to the conversation My writing has smoked out so many individuals who seem to be thinking about the same questions I hope that this book will provide a meeting place for us the scattered refugees

of what I'll call The Church of Hopeful Uncertainty      The Much-at-Once Bruce W. Wilshire, 2016-02-01 In this capstone work the late Bruce Wilshire seeks to rediscover the fullness of life in the world by way of a more complete activation of the body's potentials. Appealing to our powers of hearing and feeling with a special emphasis on music, he engages a rich array of composers, writers, and thinkers ranging from Beethoven and Mahler to Emerson and William James. Wilshire builds on James's concept of the much at once to name the superabundance of the world that surrounds, nourishes, holds, and stimulates us that pummels and provokes us that responds to our deepest need to feel ecstatically real      Brain, Body, and Mind Walter Glannon, 2013-05-02 This book is a discussion of the most timely and contentious issues in the two branches of neuroethics: the neuroscience of ethics and the ethics of neuroscience. Drawing upon recent work in psychiatry, neurology, and neurosurgery, it develops a phenomenologically inspired theory of neuroscience to explain the brain-mind relation. The idea that the mind is shaped not just by the brain but also by the body and how the human subject interacts with the environment has significant implications for free will, moral responsibility, and moral justification of actions. It also provides a better understanding of how different interventions in the brain can benefit or harm us. In addition, the book discusses brain imaging techniques to diagnose altered states of consciousness, deep brain stimulation to treat neuropsychiatric disorders, and restorative neurosurgery for neurodegenerative diseases. It examines the medical and ethical trade-offs of these interventions in the brain when they produce both positive and negative physical and psychological effects and how these trade-offs shape decisions by physicians and patients about whether to provide and undergo them      *Plan to Live Forever* Jonathon C. Leise CFP AWMA, 2016-04-26 Aging is inevitable, but it sure beats the alternative. So as long as you are going to age anyway, you might as well take the steps and put in the work to age as well as possible and be the best older you that you can possibly be. As we age, it is important that we have enough financial resources to do the things we need to do to age well and to enjoy whatever lifestyle we chose to lead. So planning to live forever must include planning to accumulate sufficient financial resources to make your money last forever. I like to call this combination of aging well and having the financial resources to do so financial gerontology. This book is a guide to the proper steps we can take or seeds we can plant to live your best, longest, most prosperous, and most impactful life. What follows in these pages is meant to make you believe that you have the power and ability to make life better for yourself and others. In fact, if you learn enough, avoid some of the serious mistakes many people make, and get on the road to good health and financial freedom, you can change not only your life but the lives of those you love      **Bioaesthetics** Carsten Strathausen, 2017-10-15 In recent years, bioaesthetics has used the latest discoveries in evolutionary studies and neuroscience to provide new ways of looking at art and aesthetics. Carsten Strathausen's remarkable exploration of this emerging field is the first comprehensive account of its ideas as well as a timely critique of its limitations. Strathausen familiarizes readers with the basics of bioaesthetics, grounding them in its philosophical underpinnings while articulating its key components. Importantly, he delves into the longstanding problem of the two cultures

that separate the arts and the sciences Seeking to make bioaesthetics a more robust way of thinking Strathausen then critiques it for failing to account for science s historical and cultural assumptions At its worst he says biologism reduces artworks to mere automatons that rubber stamp pre established scientific truths Written with a sensitive understanding of science s strengths and willing to refute its best arguments Bioaesthetics helps readers separate the sensible from the specious At a time when humanities departments are shrinking and when STEM education is on the rise Bioaesthetics makes vital points about the limitations of science while lodging a robust defense of the importance of the humanities From the Brain to the Classroom Sheryl Feinstein,2014-01-15 Supplying a foundation for understanding the development of the brain and the learning process this text examines the physical and environmental factors that influence how we acquire and retain information throughout our lives The book also lays out practical strategies that educators can take directly into the classroom Comprising more than 100 entries From the Brain to the Classroom The Encyclopedia of Learning gathers experts in the fields of education neuroscience and psychology to examine how specific areas of the brain work in thought processes and identifies how educators can apply what neuroscience has discovered to refine their teaching and instructional techniques The wide range of subjects organized within the main categories of student characteristics classroom instructional topics and learning challenges include at risk behaviors cognitive neuroscience autism the lifespan of the brain from prenatal brain development to the aging brain technology based learning tools and addiction Any reader who is interested in learning about how the brain works and how it relates to everyday life will find this work fascinating while educators will find this book particularly helpful in validating or improving their teaching methods to increase academic achievement Psychology Daniel L. Rushdy, 2018-05-01 *After Injury* explores the practices of forgiveness resentment and apology in three key moments when they were undergoing a dramatic change The three moments are early Christian history for forgiveness the shift from British eighteenth century to Continental nineteenth century philosophers for resentment and the moment in the 1950s postwar world in which British ordinary language philosophers and American sociologists of everyday life theorized what it means to express or perform an apology The debates that arose in those key moments have largely defined our contemporary study of these practices **Thinking Outside the Brain Box** Arie Bos, 2017-08-17 Is it our brain that produces consciousness Many

people including most scientists hold such a belief founded on a conception of the world that is purely materialistic This worldview sees the brain as some kind of biological computer However modern research shows that our experiences especially in childhood and youth shape the circuits of our brain and even stimulate the brain to grow So to an extent we shape our own brain just through being alive And it is by means of our brain that we develop as a person and form our self with all its associated significance and values In this revealing study of brain body and consciousness Arie Bos examines the limitations of the materialist view to explain our human experience He points to examples where consciousness is not supported by the physical brain or where consciousness appears to survive beyond death Exploring the ideas of free will and responsibility he rejects the view that only physical matter determines our thoughts and actions In doing so he opens a door to a wider spiritual reality [What's So Wrong with Being Absolutely Right](#) Judy J.
