Circular Economy and Sustainable Value Creation through Eco-Innovation Srikanta Patnaik, Leon Miller, Francesco Vigliarolo, 2025-05-28 Circular economy and sustainable value creation through eco innovation are interconnected concepts that revolve around creating a more sustainable and environmentally friendly approach to economic growth and business development In a world confronted by pressing environmental challenges the need for sustainable economic practices has never been more urgent The traditional linear economic model characterized by the take make dispose approach has led to resource depletion environmental degradation and social inequalities In response to these challenges the concepts of circular economy and eco innovation have emerged as powerful frameworks for reshaping our economic systems to prioritize sustainability The circular economy represents a paradigm shift from the linear economic model that has dominated for centuries Instead of viewing resources as finite and disposable the circular economy embraces the idea that resources can be kept in circulation for as long as possible thereby minimizing waste and environmental impact At the core of the circular economy is the efficient use of resources This entails reducing resource consumption reusing products and materials and recycling to extend the life of resources Products are designed with durability and ease of repair in mind ensuring they have a longer lifespan and can be easily maintained Circular practices aim to restore natural systems and reduce harm to the environment whether through reforestation soil regeneration or sustainable agriculture
