Exploring the Interaction between Health-promoting and Health Risk Behaviours in Health Huixuan Zhou,Feng Jiang ,Yi-lang Tang,2024-05-28 Health related behaviours play positive or negative roles in people s health For instance health risk behaviours such as sedentary behaviours e g binge watching TV and playing computer games the use of alcohol tobacco or other substances and lack of sleep have been found to negatively affect the physical and mental health of people On the other hand some studies show that health promoting behaviours such as physical activity and healthy dietary habits can mitigate or reverse the negative effects of health risk behaviours on health outcomes In the meantime some studies indicate that the harmful effects of some health risk behaviours may not be mitigated by health promoting behaviours For instance some studies show that sedentary behaviours and physical activity are independently associated with some physical and mental health outcomes interventions to increase physical activity with and without decreasing sedentary time lead to different health outcomes Clearly more research is needed to show the interaction between health promoting behaviours and health risk behaviours in health which could shed light on the management of health related behaviours

Instinct Ray Meddis,2017-09-07 Most of us believe that we sleep in order to rest our tired bodies and minds Originally published in 1977 this centuries old common sense view is challenged by Ray Meddis who describes and argues for a controversial new theory of the nature and function of sleep The theory seeks to replace the old view with the idea that sleep may no longer serve any important function in modern man Whereas the sleep instinct helps animals to survive by driving them to hide away for as long as possible each day this is no longer a valuable asset in civilised surroundings Nevertheless as the author explains we still feel driven by a primeval urge beyond conscious control to crawl away every evening to the security of our beds to wait out the dangerous hours of darkness which were such a threat to our ancestors Contrary to contemporary wisdom he also argues that dreaming is a primitive and particularly valueless kind of sleep a crude a dangerous heritage from our reptilian ancestors which is kept to a bare minimum in most adult warm blooded creatures Ray Meddis writes in a non technical style and succeeds admirably in making the science of sleep and intensive research studies on sleep accessible and even exciting for the general reader as well as for the scientist He shows that not everyone is bound by a felt need for sleep in fact some human beings discussed at length in the book thrive on less than two hours sleep a night without any ill effects The implications of the research described are little short of sensational in particular Dr Meddis believes that it is well within the bounds of possibility that future research will show us how changes can be brought about in normal people to free them from the bondage of their sleep instincts This new perspective also leads directly into a radical reappraisal of the nature of insomnia and new possibilities for treatment **Sleep in Women, An Issue of Sleep**

Carskadon,2002-07-11 There is a growing concern in relation to the problem of insufficient sleep particularly in the United States In the early 1990s a Congressionally mandated commission noted that insufficient sleep is a major contributor to catastrophic events such as Chernobyl and the Exxon Valdez as well as personal tragedies such as automobile accidents Adolescents appear to be among the most sleep deprived populations in our society though they are rarely included in sleep assessments This book explores the genesis and development of sleep patterns in adolescents It examines biological and cultural factors that influence sleep patterns presents risks associated with lack of sleep and reveals the effects of environmental factors such as work and school schedules on sleep Adolescent Sleep Patterns will appeal to psychologists and sociologists of adolescence who have not yet considered the important role of sleep in the lives of our youth *Current Research on Sleep and Dreams* United States. Public Health Service,Gay Gaer Luce,1966 This monograph was stimulated by the extraordinary growth now apparent in an area generally identified as sleep and dream research for this recent concentration of scientific effort offers a singular example of the power that basic research can exert in penetrating the problems of mental health and illness In the past year alone the National Institute of Mental Health supported over 60 projects related in whole or in part to studies of sleep and dreams with awards totaling over 2 million The work of many of these NIMH investigators is included in this summary which extends beyond the Institute s program insofar as necessary to indicate the major trends of work in the area The report cannot of course encompass the classical studies already summarized in published literature nor even provide comprehensive survey of present day sleep research for although much of the scientific data on sleep have been generated during the last dozen years significant references in this field now number in the many thousands The mosaic of disciplines contributing to the study of sleep contains such diverse fields as psychiatry and mathematics psychology and biochemistry physiology and anthropology Nevertheless ferment about the subject matter and a spirit of cooperation across traditional disciplinary lines have made it possible to knit together data that might otherwise have lain unrelated in a variety of laboratories During the past year individual summaries of many of the projects cited here were distributed to scientists working in the field of sleep and dreams Many of the recipients felt that up to date reports especially in a field of such dynamic activity represented a unique solution to the problem of scientific information exchange Such communication it was felt provided a quick look at work in progress that might prevent duplication of effort and stimulate pertinent contacts among scientists thus aiding them in their work It is hoped that this monograph will be a further part of that process Foreword *Healthy Sleeping Habits* Yvette Green,2015-01-08 Are you feeling restless and tired Are you experiencing sleep issues Sleep like a baby with a few
