Fronk, 1978 **Advances in Biomedical Photonics and Imaging** Qingming Luo, 2008 This unique volume contains selected papers presented at the 6th International Conference on Photonics and Imaging in Biology and Medicine PIBM 2007 held on November 4 6 2007 at Wuhan National Laboratory for Optoelectronics Huazhong University of Science and Technology Wuhan P R China PIBM is designed to bring together scientists engineers and clinical researchers from a variety of disciplines engaged in applying optical science photonics and imaging technologies to problems in biology and medicine The scope of this conference ranges from basic research to instrumentation engineering to biological and clinical studies It is recognized as one of the largest and most comprehensive international conferences in China and represents the highest level of worldwide research in this field An increasing number of young researchers are presenting and exchanging their innovative ideas on this friendly and professional platform thus making PIBM a not to be missed annual meeting in Wuhan **Advances in Superconductivity VIII** Hisao Hayakawa, Youichi Enomoto, 2013-11-11 Since the discovery of superconductivity with transition temperatures above 77 K concentrated research activities toward the

exploration of practical applications of these materials have been carried out. Currently, a remarkable improvement in superconducting properties has been achieved due to the fine optimization of fabrication processes and this has attracted industrial interest for future applications. In the case of  $\text{NdBaCuO}$  materials, a new pinning mechanism was found which enhances the critical current under applied magnetic fields. In single crystals of these materials, oxygen control results in an increase in the growth rate. The metalorganic chemical vapor deposition (MOCVD) film quality has been improved by using a new liquid raw material. Simultaneously, real demands from the viewpoint of the market start to be a motivation force especially in electronics application where some products are already being sold. At the same time, interesting physical properties have been obtained from a new superconducting single crystal which has a layered perovskite structure without copper. In addition, various precision measurement techniques have confirmed the d-wave mechanism and the existence of intrinsic Josephson junctions in single crystals. These new phenomena challenge the existing theoretical models but also open the way for new applications. These significant areas of progress in materials science have led high  $T_c$  superconductivity research into the next phase of activity while fundamental research continues to be very important. I sincerely hope that this volume will give further impetus to this development.
