Swine Feeding and Nutrition Tony Cunha, 2012-12-02 *Swine Feeding and Nutrition* provides detailed information on aspects of swine production. It begins with a presentation of the past, present and future of the swine industry. Then it reviews the many factors that can affect nutrient requirements and needs. This text summarizes minerals, vitamins, proteins, amino acids, carbohydrates, fiber, fatty acids, fat, energy, water, enzymes, and antibiotics and other antimicrobial compounds in the swine industry. Furthermore, it discusses the relative value of feeds for use in swine diets and the feeding requirements for baby pig, growing, finishing pigs, and the breeding herd. This book will be very valuable to beginners in swine production, established swine raisers, feed manufacturers and dealers, county agents, farm advisors, and consultants, and veterinarians. Swine Production and Nutrition Wilson G. Pond, 2014-05-14. The purpose of this text, as stated in the preface to our book *Swine Production in Temperate and Tropical Environments* 1974, is to provide a technical basis for successful production of pork in both temperate and tropical environments. The competitive position of pork as a food source, both in the developed and developing countries, has continued to be strengthened during the past 10 years. In this book, we update the current knowledge and technology upon which pork production is based, covering extensively the new knowledge of feeds and their nutrient values. The current growth of the world swine population is faster than that of the human population, reflecting the high demand for pork among consumers in all parts of the world. Advances in genetics, physiology, nutrition, and biotechnology have permitted continued improvements in efficiency of pork production, and prospects are bright for continued advances. The principles of modern production technology addressed in this book provide the basis for application by the swine industry in a broad range of environmental and economic settings. We have attempted to present a balanced coverage of the biological, economic, and husbandry aspects of swine production for use by college and university students, personnel in the feed and food industries, livestock extension specialists, and commercial swine producers.
