## **Switching The Odds:**

*Crossing the Aisle* Antoine Yoshinaka, 2015-11-24 Switching parties is arguably the most important decision a politician will ever make This book is the first ever systematic study of the causes and consequences of legislative party switching in the United States The author argues that re election alone does not explain party switching He proposes an ambition based theory that accounts for multiple goals including higher office aspirations and the desire for influence in the legislature with a focus on the electoral costs and the institutional benefits of the decision The book combines the statistical analysis of electoral data and legislative careers in the US Congress and state legislatures with elite interviews of party switchers non switchers and a party leader The case study of a party switcher s decision in real time documents the complexity of the decision in a politician s own words prior to and following the switch The book raises important questions regarding the meaning of a party label

**Doing Engineering** Joyce Tang, 1999 The first to systematically compare Caucasians African Americans and Asian Americans in engineering this study of the career attainment and mobility of engineers in the United States tells how these three groups fare in the American engineering labor market and what they can look forward to in the future The numbers of black and Asian engineers recently have grown at a much faster rate than the number of Caucasian engineers With a projected steady increase in engineering jobs and demographic shifts this trend should continue Yet recent writings on the engineering profession have said little about career mobility beyond graduation This book identifies and explores key issues determining whether minorities in the US will attain occupational equality with their Caucasian counterparts Highlighting implications for theory policy making and the future of the profession *Doing Engineering* offers important insights into labor race and ethnicity that will be of interest to anyone studying stratification in a wide range of professional occupations

*Students' school transition patterns between 8th and 10th grades, based on NELS:88* , *Journal of the National Cancer Institute* ,2011-07 *Cognitive Perspectives on Bilingualism* Monika Reif,Justyna A. Robinson,2016-04-25 Only 15 years ago bilingualism was somewhat outside the main debates in cognitive linguistics Cognitive linguistics had to a large extent taken for granted the fact that language is embodied in our experience However not much attention was given to questions of whether any changes to our language repertoire alter the way we perceive the world around us A growing body of recent research suggests that one cannot understand the cognitive foundations of language without looking at bi and multilingual speakers In this vein the present book aims to contribute to the existing debate of the relationship between language culture and cognition by assessing differences and similarities between monolingual and bilingual language acquisition and use In particular it investigates the effect of conceptual semantic and pragmatic properties of constructions on code choice and code switching as well as the impact of bilingual and bicultural education on speakers cognitive development This collective volume systematises reviews and promotes a range of theoretical perspectives and research techniques that currently inform work across the disciplines of bilingualism and code switching **Changing Relationships** Malcolm Brynin,John

Ermisch,2008-11-23 Some relationships are within the family such as between parents and children grandparents and children and between siblings while others are between friends In some cases these distinctions are blurred Are short term partners family members Are family members seen as such when relations become unfriendly Does divorce if amicable replace a family with a friendship Using quantitative cutting edge statistical analysis in conjunction with a multi disciplinary approach the contributors to this volume address the contemporary state of and dynamics in these various types of relationships linking these to key rites of passage such as leaving home marriage and childbirth to see how these stand after a period of rapid social change The book will be of interest to scholars in a broad range of disciplines including sociology social policy and economics **Students' School Transition Patterns Between 8th and 10th Grades, Based on**

**NELS:88** David E Myers,1995 **Computational Models of Argument** P. Baroni,T.F. Gordon,T. Scheffler,2016-09-02 Research into computational models of argument is a rich interdisciplinary field involving the study of natural artificial and theoretical argumentation and requiring openness to interactions with a variety of disciplines ranging from philosophy and cognitive science to formal logic and graph theory The ultimate aim is to support the development of computer based systems able to engage in argumentation related activities either with human users or among themselves This book presents

the proceedings of the sixth biennial International Conference on Computational Models of Argument COMMA 2016 held in Potsdam Germany on 12-16 September. The aim of the COMMA conferences is to bring together researchers interested in computational models of argument and the representation of argumentation structures in natural language texts with special attention to contributions concerning emerging trends and the development of new connections with other areas. The book contains the 25 full papers, 17 short papers and 10 demonstration abstracts presented at the conference together with 3 invited talks. Subjects covered include abstract bipolar and structured argumentation, quantitative approaches and their connections with formalisms like Bayesian networks and fuzzy logic, multi-agent scenarios, algorithms and solvers, and mining arguments in text, dialogue and social media. The book provides an overview of current research and developments in the field of computational models of argument and will be essential reading for all those with an interest in the field.

The Changing German Voter Rüdiger Schmitt-Beck, Sigrid Roßteutscher, Harald Schoen, Bernhard Weßels, Christof Wolf, 2022. The Changing German Voter examines the massive changes that German voters' behavior underwent during the second decade of the 21st century.

The Politics of Polarisation Anna Bosco, Susannah Verney, 2022-08-22. Focusing on Italy, Spain and Greece, this book explores the extent of polarisation as well as its causes, characteristics and consequences. It investigates varied manifestations of polarised politics, including leader polarisation, policy polarisation and affective polarisation, as well as providing case studies of polarised elections taking place at multiple levels. In recent years, polarisation has been a key feature of South European politics. Deep antagonism has moved party leaders against each other, hindered parliamentary and governmental cooperation and triggered a cascade effect of harsh divisions among elites and citizens. Beyond the left-right axis, the chapters in this volume highlight multiple dimensions around which parties and voters polarise: the split around sovereign bailouts in Greece, the territorial cleavage in Spain, the divisions around immigration and European integration in Italy. This volume offers essential understanding of the specific features of polarisation in different national contexts and the consequences for political competition and government instability. The chapters in this book were originally published as a special issue of *South European Society and Politics*.

**Advances in Econometrics, Operational Research, Data Science and Actuarial Studies** M. Kenan Terzioğlu, 2022-01-17. This volume presents techniques and theories drawn from mathematics, statistics, computer science and information science to analyze problems in business, economics, finance, insurance and related fields. The authors present proposals for solutions to common problems in related fields. To this end, they are showing the use of mathematical, statistical and actuarial modeling and concepts from data science to construct and apply appropriate models with real-life data and employ the design and implementation of computer algorithms to evaluate decision-making processes. This book is unique as it associates data science data scientists coming from different backgrounds with some basic and advanced concepts and tools used in econometrics, operational research and actuarial sciences. It therefore is a must-read for scholars, students and practitioners interested in a better understanding of the

techniques and theories of these fields      The Health of Aging Hispanics Jacqueline L. Angel, Keith E. Whitfield, 2007-08-06

The emergence of the Hispanic population in the United States and the increasing profile of Latin America on the North and South American continents have raised the profile of Latino issues in the American consciousness. Much of this attention, however, has revolved around trends in culture, art, food, and music, or pathological concerns about poverty, crime, drugs, and immigration. At best, the scholarly and policy assessments of the implications of the impact of Latinos in the United States revolve around Mexican Americans, Puerto Ricans, and Central Americans, as well as the children of an older Cuban population and their struggles to achieve a measure of education, healthcare, employment, and civil rights. What have not been adequately addressed are the demographic trends affecting Latinos in the United States, Mexico, and Latin America, particularly the aging of the Hispanic population and its resultant health and long-term care needs. That Latinos are living longer and shifting from a youthful population to an increasingly older cohort is little known, except among the small cadre of Hispanic gerontologists. Ironically, this invisibility of aging Hispanics is juxtaposed to the almost picked response of the U.S. media and public toward the aging of the general U.S. population and the social and political controversies over Social Security, Medicare, and health care costs. The policy debates of an aging U.S. population as a whole arise from substantial research and policy analysis, a level of attention not seen with regard to the aging of the Hispanic population.

*Explaining Russian-German code-mixing* Nikolay Hakimov, 2021

The study of grammatical variation in language mixing has been at the core of research into bilingual language practices. Although various motivations have been proposed in the literature to account for possible mixing patterns, some of them are either controversial or remain untested. Little is still known about whether and how frequency of use of linguistic elements can contribute to the patterning of bilingual talk. This book is the first to systematically explore the factor usage frequency in a corpus of bilingual speech. The two aims are i) to describe and analyze the variation in mixing patterns in the speech of Russian-German adolescents and young adults in Germany, and ii) to propose and test usage-based explanations of variation in mixing patterns in three morphosyntactic contexts: the adjective-modified noun phrase, the prepositional phrase, and the plural marking of German noun insertions in bilingual sentences. In these contexts, German noun insertions combine with either Russian or German words and grammatical markers, thus yielding mixed bilingual and German monolingual constituents. In otherwise Russian sentences, the latter are also labelled as embedded language islands. The results suggest that the frequency with which words are used together mediates the distribution of mixing patterns in each of the examined contexts. The differing impacts of co-occurrence frequency are attributed to the distributional and semantic specifics of the analyzed morphosyntactic configurations. Lexical frequency has been found to be another important determinant in this variation. Other factors include recency or lexical priming in discourse in the case of prepositional phrases and phonological and structural similarities and differences in the inflectional systems of the contact languages in the case of plural marking.
