Symbolic Species The Co Evolution Of Language And The Human Brain:

The Symbolic Species: The Co-evolution of Language and the Brain Terrence W. Deacon, 1998-04-17 A work of enormous breadth likely to pleasantly surprise both general readers and experts New York Times Book Review This revolutionary book provides fresh answers to long standing questions of human origins and consciousness Drawing on his breakthrough research in comparative neuroscience Terrence Deacon offers a wealth of insights into the significance of symbolic thinking from the co evolutionary exchange between language and brains over two million years of hominid evolution to the ethical repercussions that followed man s newfound access to other people s thoughts and emotions Informing these insights is a new understanding of how Darwinian processes underlie the brain s development and function as well as its evolution In contrast to much contemporary neuroscience that treats the brain as no more or less than a computer Deacon provides a new clarity of vision into the mechanism of mind It injects a renewed sense of adventure into the experience of being human

The Symbolic Species Terrence William Deacon, 1997 Discusses the evolution of language from the viewpoint of symbolic reference as opposed to the conventional grammar based theories *The Symbolic Species* Terrence W. Deacon, 1998 Human language is one of the most distinctive behavioural adaptations on the planet Languages evolved in only one species in only one way without precedent and without parallel Hundreds of millions of years of evolution have produced hundreds of thousands of species with brains and tens of thousands with complex learning abilities Only one of these has ever wondered about its place in the whole scheme because only one through its language evolved with the ability to do so This book aims to alter the understanding of what it means to be human the universe isn t a soulless blindly spinning clockwork but instead nascent hear and mind **The Symbolic Species** Terrence William Deacon, 1997 **The**

Coevolution of Language, Teaching, and Civil Discourse Among Humans Donald M. Morrison, 2020-07-25 This book traces the evolutionary trajectory of language and teaching from the earliest periods of human evolution to the present day The author argues that teaching is unique to humans and our ancestors and that the evolution of teaching language and culture are the inextricably linked results of gene culture coevolutionary processes Drawing on related fields including archaeology palaeontology cultural anthropology evolutionary psychology and linguistics he makes the case that the need for joint attention and shared goals in complex adaptive strategies is the underlying driver for the evolution of language like communication This book will be of interest to students and scholars of these disciplines as well as lay readers with an interest in human origins *Mirror Neurons and the Evolution of Brain and Language* Maxim I. Stamenov, Vittorio

Gallese, 2002-12-17 The emergence of language social intelligence and tool development are what made homo sapiens sapiens differentiate itself from all other biological species in the world The use of language and the management of social and instrumental skills imply an awareness of intention and the consideration that one faces another individual with an attitude analogical to that of one s own The metaphor of mirror aptly comes to mind Recent investigations have shown that

the human ability to mirror other's actions originates in the brain at a much deeper level than phenomenal awareness. A new class of neurons has been discovered in the premotor area of the monkey brain: mirror neurons. Quite remarkably, they are tuned to fire to the enaction as well as observation of specific classes of behavior: fine manual actions and actions performed by mouth. They become activated independent of the agent, be it the self or a third person whose action is observed. The activation in mirror neurons is automatic and binds the observation and enaction of some behavior by the self or by the observed other. The peculiar first to third person intersubjectivity of the performance of mirror neurons and their surprising complementarity to the functioning of strategic communicative face to face first to second person interaction may shed new light on the functional architecture of conscious vs unconscious mental processes and the relationship between behavioral and communicative action in monkeys, primates and humans. The present volume discusses the nature of mirror neurons as presented by the research team of Prof. Giacomo Rizzolatti, University of Parma, who originally discovered them and the implications to our understanding of the evolution of brain, mind and communicative interaction in non-human primates and man. Series B The Evolution of Language Andrew D. M. Smith, Kenny Smith, Ramon Ferrer i Cancho, 2008. This proceedings volume contains the latest results from the field of particle physics. The contributions cover the current status of all the Large Hadron Collider (LHC) experiments, the implications of the LHC for cosmology and the search for dark matter and nuclear astrophysics. It also includes work on the current status of the future International Linear Collider (ILC).

Human Identity at the Intersection of Science, Technology and Religion Dr. Christopher C. Knight, Professor Nancey Murphy, 2013-06-28. Humans are unique in their ability to reflect on themselves. Recently, a number of scholars have pointed out that human self-conceptions have a history. Ideas of human nature in the West have always been shaped by the interplay of philosophy, theology, science and technology. The fast pace of developments in the latter two spheres (neuroscience, genetics, artificial intelligence, biomedical engineering) call for fresh reflections on what it means now to be human and for theological and ethical judgments on how we might shape our own destiny in the future. The leading scholars in this book offer fresh contributions to the lively quest for an account of ourselves that does justice to current developments in theology, science, technology and philosophy. **Human Identity at the Intersection of Science, Technology and Religion** Christopher C. Language as a Complex Adaptive System Nick C. Ellis, Diane Larsen-Freeman, 2009-12-30.

Explores a new approach to studying language as a complex adaptive system illustrating its commonalities across many areas of language research Brings together a team of leading researchers in linguistics psychology and complex systems to discuss the groundbreaking significance of this perspective for their work Illustrates its application across a variety of subfields including languages usage language evolution language structure and first and second language acquisition What a breath of fresh air As interesting a collection of papers as you are likely to find on the evolution learning and use of language from the point of view of both cognitive underpinnings and communicative functions Michael Tomasello Max Planck Institute for Evolutionary Anthropology *Language and History* Nigel Love, 2006-04-18 When linguistics was first established as an academic discipline in the nineteenth century it was envisaged as an essentially historical study Languages were to be treated as historical objects evolving through gradual but constant processes of change over long periods of time In recent years however there has been much discussion by historians of a linguistic turn in their own discipline and in linguistics integrationist theory has mounted a radical challenge to the traditional notion of languages as possible objects of inquiry Language and History develops the integrationist critique of orthodox linguistics while at the same time extending its implications to the field of history By doing so it throws light on what is now recognized by many historians to be a crisis in their own discipline Underlying the post modernist scepticism about traditional forms of historiography the integrationist approach reveals a more deep seated problem concerning the interface between philosophy of history and philosophy of language With chapters from a range of leading international contributors Language and History represents a significant contribution to the developing work of the integrationists *Rethinking Human Evolution* Jeffrey H. Schwartz, 2022-11-01 Contributors from a range of disciplines consider the disconnect between human evolutionary studies and the rest of evolutionary biology The study of human evolution often seems to rely on scenarios and received wisdom rather than theory and methodology with each new fossil or molecular analysis interpreted as supporting evidence for the presumed lineage of human ancestry We might wonder why we should pursue new inquiries if we already know the story Is paleoanthropology an evolutionary science Are analyses of human evolution biological In this volume contributors from disciplines that range from paleoanthropology to philosophy of science consider the disconnect between human evolutionary studies and the rest of evolutionary biology All of the contributors reflect on their own research and its disciplinary context considering how their fields of inquiry can move forward in new ways The goal is to encourage a more multifaceted intellectual environment for the understanding of human evolution Topics discussed include paleoanthropology s history of procedural idiosyncrasies the role of mind and society in our evolutionary past humans as large mammals rather than a special case genomic analyses computational approaches to phylogenetic reconstruction descriptive morphology versus morphometrics and integrating insights from archaeology into the interpretation of human fossils Contributors Markus Bastir Fred L Bookstein Claudine Cohen Richard G Delisle Robin Dennell Rob DeSalle John de Vos Emma M Finestone Huw S Groucutt Gabriele A Macho
