Symmetry Causality Mind Bradfords:

Symmetry, Causality, Mind Michael Leyton, 1992 In this investigation of the psychological relationship between shape and time Leyton argues compellingly that shape is used by the mind to recover the past and as such it forms a basis for memory Michael Leyton's arguments about the nature of perception and cognition are fascinating exciting and sure to be controversial In this investigation of the psychological relationship between shape and time Leyton argues compellingly that shape is used by the mind to recover the past and as such it forms a basis for memory He elaborates a system of rules by which the conversion to memory takes place and presents a number of detailed case studies in perception linguistics art and even political subjugation that support these rules Leyton observes that the mind assigns to any shape a causal history explaining how the shape was formed We cannot help but perceive a deformed can as a dented can Moreover by reducing the study of shape to the study of symmetry he shows that symmetry is crucial to our everyday cognitive processing Symmetry is the means by which shape is converted into memory Perception is usually regarded as the recovery of the spatial layout of the environment Leyton however shows that perception is fundamentally the extraction of time from shape In doing so he is able to reduce the several areas of computational vision purely to symmetry principles Examining grammar in linguistics he argues that a sentence is psychologically represented as a piece of causal history an archeological relic disinterred by the listener so that the sentence reveals the past Again through a detailed analysis of art he shows that what the viewer takes to be the experience of a painting is in fact the extraction of time from the shapes of the painting Finally he highlights crucial aspects of the mind's attempt to recover time in examples of political subjugation
