

13 Syndromes of the Head and Neck

Chris Jo, DMD

This chapter addresses:

- Cleft Lip and Palate
- Nonsyndromic Craniosynostosis
- Apert Syndrome
- Crouzon Syndrome
- Hemifacial Microsomia
- Obstructive Sleep Apnea Syndrome

A multitude of anomalies and syndromes occur in the head and neck, most of which are beyond the scope of this book. This chapter covers some of the most common anomalies or syndromes associated with the craniomaxillofacial region. Congenital anomalies include nonsyndromic craniosynostosis, hemifacial microsomia, and cleft lip and palate (CLP). Congenital syndromes include Apert and Crouzon syndromes. Unlike the other syndromes in this section, which are congenital, obstructive sleep apnea syndrome (OSAS) is included here because the pathogenesis and manifestation of this syndrome are based on anatomical anomalies of the head and neck. Oral and maxillofacial surgeons are uniquely trained and play an integral role in the surgical management of these patients, whether or not syndromic.

The intent of this chapter is to familiarize readers with the pathogenesis, presentation, and management strategies of such anomalies. The chapter is structured so that key features of each syndrome or anomaly are emphasized. The reconstructive strategies and rationale for treatment are discussed. Because of the complexity of craniofacial deformities involved in the growing child, the reconstructive efforts are generally staged. There is no consensus on the best timing of each stage, but the general guidelines are presented. Various surgical strategies, depending on the surgeons' preference and clinical situation, can be used. These are presented in the chapter along with their rationale of treatment. Table 13-1 outlines the characteristics of some craniofacial syndromes.

Table 13-1. Characteristics of Some Craniofacial Syndromes

Syndrome	Prevalence/ Inheritance	Genetic	Synostosis/Orbit	Limbs	Central Nervous System
