*Semantic Structures for the Syntax of Complements and Auxiliaries in English* James W. Ney, 2019-07-22 No detailed description available for Semantic Structures for the Syntax of Complements and Auxiliaries in English The Semantics of Grammar Anna Wierzbicka, 1988-01-01 The semantics of grammar presents a radically semantic approach to syntax and morphology It offers a methodology which makes it possible to demonstrate on an empirical basis that syntax is neither autonomous nor arbitrary but that it follows from semantics It is shown that every grammatical construction encodes a certain semantic structure which can be revealed and rigorously stated so that the meanings encoded in grammar can be compared in a precise and illuminating way within one language and across language boundaries The author develops a semantic metalanguage based on lexical universals or near universals and ultimately on a system of universal semantic primitives and shows that the same semantic metalanguage can be used for explicating lexical grammatical and pragmatic aspects of language and thus offers a method for an integrated linguistic description based on semantic foundations Analyzing data from a number of different languages including English Russian and Japanese the author explores the notion of ethnosyntax and via semantics links syntax and morphology with culture She attempts to demonstrate that the use of a semantic metalanguage based on lexical universals makes it possible to rephrase the Humboldt Sapir Whorf hypothesis in such a way that it can be tested and treated as a program for empirical research Toward a Cognitive Semantics, Volume 1 Leonard Talmy, 2003-01-24 In this two volume set Talmy approaches the question of how language organizes conceptual material both at a general level and by analyzing a crucial set of particular conceptual domains space and time motion and location causation and force interaction and attention and viewpoint One of a two volume set defining the field of cognitive semantics Leonard Talmy approaches the question of how language organizes conceptual material both at a general level and by analyzing a crucial set of particular conceptual domains space and time motion and location causation and force interaction and attention and viewpoint Talmy maintains that these are among the most fundamental parameters by which language structures conception By combining these conceptual domains into an integrated whole Talmy shows we advance our understanding of the overall conceptual and semantic structure of natural language Volume one examines the fundamental systems by which language shapes concepts *Toward a Cognitive Semantics* Leonard Talmy, 2003 V 1 concept structuring systems V 2 Typology and process in concept structuring **The English existential** Lyle Jenkins, 2012-10-25 Over the past few decades the book series *Linguistische Arbeiten* Linguistic Studies comprising over 500 volumes has made a significant contribution to the development of linguistic theory both in Germany and internationally The series will continue to deliver new impulses for research and maintain the central insight of linguistics that progress can only be made in acquiring new knowledge about human languages both synchronically and diachronically by closely combining empirical and theoretical analyses To this end we invite submission of high quality linguistic studies from all the central

Payne,Sara Pacchiarotti,Mokaya Bosire ,2016-12-31 Diversity in African Languages contains a selection of revised papers from the 46th Annual Conference on African Linguistics held at the University of Oregon Most chapters focus on single languages addressing diverse aspects of their phonology morphology semantics syntax information structure or historical development These chapters represent nine different genera Mande Gur

Kwa Edoid Bantu Nilotic Gumuzic Cushitic and Omotic Other chapters investigate a mix of languages and families moving from typological issues to sociolinguistic and inter ethnic factors that affect language and accent switching Some chapters are primarily descriptive while others push forward the theoretical understanding of tone semantic problems discourse related structures and other linguistic systems The papers on Bantu languages reflect something of the internal richness and continued fascination of the family for linguists as well as maturation of research on the family The distribution of other papers highlights the need for intensified research into all the language families of Africa including basic documentation in order to comprehend linguistic diversities and convergences across the continent In this regard the chapter on Daats i in Gumuzic stands out as the first ever published article on this hitherto unknown and endangered language found in the Ethiopian Sudanese border lands

**The Morphosyntax of Transitions** Víctor Acedo-Matellán, 2016 This book examines the cross linguistic expression of changes of location or state taking as a starting point Talmy's typological generalization that classifies languages as either satellite framed or verb framed In verb framed languages such as those of the Romance family the information about the predicate is encoded by the verb Satellite framed languages on the other hand can be further subdivided into weak satellite framed languages in which the information is expressed by a prefix on the verb and strong satellite framed languages in which it is expressed by a preposition In this volume Víctor Acedo Matellán explores the similarities between Latin and Slavic in their expression of events of transition neither allows the expression of complex adjectival resultative constructions and both express the result state or location of a complex transition through prefixes They are therefore analysed as weak satellite framed languages along with Ancient Greek and some varieties of Mandarin Chinese and stand in contrast to strong satellite framed languages such as English the Germanic languages in general and Finno Ugric This variation is explained in terms of the morphological properties of the head expressing transition Path which is argued to be prefixal in weak but not in strong satellite framed languages On the other hand in verb framed languages like Romance Path is strictly adjacent to the eventive head v The analysis is couched in a neo constructionist approach to argument structure which accounts for the verbal elasticity shown by Latin and a Distributed Morphology approach to the syntax morphology interface
