

Важнейшим из этапов формирования геологической истории Земли является формирование и развитие земной коры. В настоящее время накоплено много фактов, свидетельствующих о том, что в ранние периоды истории Земли существовали обширные области, занятые жидкой магмой. В процессе остывания и кристаллизации магмы происходило формирование различных типов горных пород, в том числе и кристаллических сланцев. Эти сланцы, в свою очередь, подвергались метаморфизму, в результате которого происходило изменение их минерального состава и структуры. Таким образом, формирование и развитие земной коры является сложным и многоэтапным процессом, который продолжается и в настоящее время.
