

Does Size Matter?

If penis size is important, it seems to be more so for men than for women.

Unfortunately, society pressures us through messages like "size matters".

But when it comes to sex and intimacy, size doesn't really matter as much as you might think.

According to a study conducted by researchers at the University of California, Los Angeles (UCLA) and California State University

When we talk about penis size, the focus leaves out another and maybe more important measurement: **girth**.

85%
of women

Are satisfied with the size of their partner's penis.

90%
of women

Believe that width is more important than length.

55%
of men

are satisfied with their penis size.

45%
want to be larger.

Only 0.2% want to be smaller.

Penis length doesn't matter as much as you may have been led to believe when it comes to the physiology of heterosexual penetration.

A woman's vaginal canal contains lots of nerve endings that are receptive to touch.

The majority of these nerve endings are in the outer one-third of the vagina, so 5 inches is plenty long to reach and stimulate that section.

- In general, women believe that girth is more important than length. Physiologically this may be explained by the fact that the clitoris is mostly internal, made up of erectile tissue that surrounds the inside of the vagina. When a woman gets aroused, the tissue fills with blood, similar to the penis.
- The engorged tissue surrounds the inside of the vaginal wall. When the penis applies pressure to the erectile tissue, it stimulates the clitoral nerves, pleasuring the woman.

Even with all the explained above:

In the end, it's not the size of your penis that matters as much as what you do with it when it comes to satisfying your partner.

Figuring out what feels good for you and your partner and choosing moves that make the most of your penis type will serve you better than worrying about its sizes.
