**Free Will and Consciousness** Gregg D. Caruso, 2012-02-23 In recent decades with advances in the behavioral cognitive and neurosciences the idea that patterns of human behavior may ultimately be due to factors beyond our conscious control has increasingly gained traction and renewed interest in the age old problem of free will In this book Gregg D Caruso examines both the traditional philosophical problems long associated with the question of free will such as the relationship between determinism and free will as well as recent experimental and theoretical work directly related to consciousness and human agency He argues that our best scientific theories indeed have the consequence that factors beyond our control produce all of the actions we perform and that because of this we do not possess the kind of free will required for genuine or ultimate responsibility It is further argued that the strong and pervasive belief in free will which the author considers an illusion can be accounted for through a careful analysis of our phenomenology and a proper theoretical understanding of consciousness Indeed the primary goal of this book is to argue that our subjective feeling of freedom as reflected in the first person phenomenology of agentive experience is an illusion created by certain aspects of our consciousness
