 macromorphoscopic trait analysis and estimation of ancestry in forensic anthropology **The Osteology of Infants and
 Children** Brenda J. Baker, Tosha L. Dupras, Matthew W. Tocheri, 2005-07-27 Most archaeologists and bioarchaeologists
 receive little or no training in the recognition of skeletal remains of fetuses infants and children Yet many research sites may
 contain such materials Without a framework for identifying the bones or the excavation techniques suited to their recovery
 archaeologists may often overlook subadult skeletal remains or even confuse them with animal bones The Osteology of
 Infants and Children fills the need for a field and lab manual on this important topic and provides a supplemental textbook
 for human osteology courses Focusing on juvenile skeletons their recovery and identification and siding in both field and lab

settings the volume provides basic descriptions and careful illustrations of each skeletal element at varying stages of development along with sections on differentiation from other bones and siding tips The book offers detailed treatment of the skull and teeth including the cranial vault and facial bones and examines the infracranial skeleton vertebrae pelvis chest shoulders arms hands legs and feet A quick reference guide explains age estimation and identification templates The illustrations are enhanced by photographs from two recent archaeology projects in Egypt at Abydos and Dakhleh Oasis The extensive collection of fetal and child remains from these sites provides new reference material unavailable in previous publications making this manual an unparalleled resource in the field of physical anthropology
