smell within a humanities context Hajdini situates problems of olfaction at the very point of inception of cultural life He proposes that ontology civilization and capitalist economy alike can be said to amount to shit management And only by following the philosophically most deplorable of the senses the book argues can we better understand the central philosophical psychoanalytical and political issues of truth sex and exploitation

Odor Sensation and Memory

Trygg Engen, 1991-11-21 Our sense of smell as Trygg Engen reminds us early in this definitive work has been neglected as a research area This neglect belies the very critical role that the sense plays in human adaptation to the environment through the monitoring of odors Smell is learned through experience and results Engen maintains in a schema of memory system that enables individuals to process and categorize odors There are closer relationships between the individual detecting an odor the circumstances or environment and the reaction of pleasure or aversion than with the other senses When future occasions present the same or similar odors memory will bring back the early experience and directly affect the reaction to the new stimuli Engen sees odor perception as mainly psychological unlike the traditional approach which sees the sense largely as an innate mechanism with a direct physiological basis The research underlying this book is the most current in sensory cognition reminding the reader of the importance of the sense of smell through examples of what deprivation entails The author develops an appreciation of the odor sensing ability mankind has and explores the uses to which that sense is applied The ability to relate past to present perception odor memory and the gradations of odor impact are discussed as well as the

engaging questions of fragrances effects on behavior odors and sexuality mother infant bonding and pollution This book is essential reading for all who work in areas relating to sensory perception and cognition **Springer Handbook of Odor** Andrea Büttner, 2017-02-28 The Springer Handbook of Odor is the definitive guide to all aspects related to the study of smell and their impact on human life For the first time this handbook aligns the senso chemo analytical characterization of everyday smells encountered by mankind with the elucidation of perceptual hedonic behavioral and physiological responses of humans to such odors From birth onwards we learn to interact with our environment using our sense of smell Moreover evolutionary processes have engendered a multi faceted communication that is supported even dominated by olfaction This compilation examines the responses of humans to odors at different stages of life thereby building a foundation for a widely overseen area of research with broader ramifications for human life The expert international authors and editor align aspects concepts methodologies and perspectives from a broad range of different disciplines related to the science of smell These include chemistry physiology psychology material sciences technology but also disciplines related to linguistics culture art and design This handbook edited by an internationally renowned aroma scientist with the support of an outstanding team of over 60 authors is an authoritative reference for researchers in the field of odors both in academia and in industry and is also a useful reference for newcomers to the area
