**Work and Technological Change** Stephen R. Barley, 2020-10-27

In recent years a growing number of commentators have declared that we are at the beginning of a technical revolution that will see profound changes in the way we live and work. Yet what constitutes a technological revolution and what logic supports how successive technological revolutions have unfolded in Western societies? How do technologies change organizations and what are the implications of intelligent technologies for work and employment? Here Stephen R. Barley reflects on over three decades of research to explore both the history of technological change and the approaches used to investigate how technologies are shaping our work and organizations. He begins by placing current developments in artificial intelligence into the historical context of previous technological revolutions, drawing on William Faunce's argument that the history of technology is one of progressive automation of the four components of any production system: energy, transformation, transfer, and control technologies. He then considers how technologies change work and when those changes will and will not result in organizational change. In doing so, he lays out a role-based theory of how technologies produce changes in organizations. He then tackles the issue alongside Matt Beane of how to conceptualize a more thorough approach to assessing how intelligent technologies such as artificial intelligence can shape work and employment. They identify the main reasons why the current state of research on intelligent technologies in the workplace is inadequate and provide pointers on how empirical studies in this area may and must be improved. He concludes with a discussion with his long-time colleague Diane Bailey about the fears that arise when one sets out to study technical work and technical workers and the methods that they and future ethnographers can use for controlling those fears.

**Arctic and Alpine Environments** Jack D. Ives, Roger G. Barry, 2019-10-08. Originally published in 1974, *Arctic and Alpine Environments* examines the relatively simple ecosystems of arctic and alpine lands that still occupy extensive areas little disturbed by modern technology. The book argues that there is a necessity for carefully controlled development of the resources of these regions and suggests that there is a risk of irreversible disturbance without full understanding of these regions. This book provides a detailed documentation of cold-stressed arctic and alpine terrestrial environments and systematically deals with the present and past physical environment, climate, hydrology, and glaciology, biota, treeline, vegetation, vertebrate zoology, and historical biogeography, abiotic processes, geomorphological and pedological, and the role of man, bioclimatology, archaeology, and technological impact, including radioecology. The book will appeal to academics and students of environmental and biological science as well as providing a significant source for conservationists, government agencies, and industrial organizations.

**Responsible Technology** Stephen V. Monsma, Calvin Center for Christian Scholarship, 1986. This is a print-on-demand book and is therefore non-returnable. This book provides a multi-disciplinary Christian analysis of the forces shaping the operation of modern technology and offers an alternative framework of biblically rooted normative principles. It argues that

technology is a value laden activity and presents principles for basing it on God's will      Motorized Obsessions Paul R. Josephson, 2007-09-02 From dirt bikes and jet skis to weed wackers and snowblowers machines powered by small gas engines have become a permanent and loud fixture in American culture But fifty years of high speed fun and pristine lawns have not come without cost technology it powers Paul R Josephson explores the political environmental and public health issues surrounding one of America's most dangerous pastimes Each chapter tells the story of an ecosystem within the United States and the devices that wreak havoc on it personal watercraft PWCs on inland lakes and rivers all terrain vehicles ATVs in deserts and forests lawn mowers and leaf blowers in suburbia In addition to environmental impacts Josephson discusses the development and promotion of these technologies the legal and regulatory efforts made to improve their safety and environmental soundness and the role of owners clubs in encouraging responsible operation research nongovernmental organizations and manufacturers Josephson's compelling history leads to one irrefutable conclusion these machines cannot be operated without loss of life and loss of habitat      **The Mobile Phone Revolution in Morocco** Hsain

Ilahiane, 2022-02-14 In *The Mobile Phone Revolution in Morocco* Hsain Ilahiane examines how Moroccans use the mobile phone to redefine core notions of gender and space honor and shame placemaking and surveillance and control Drawing on ethnographic fieldwork with urban street vendors urban micro entrepreneurs urban female domestic workers and smallholder farmers in urban and rural Morocco Ilahiane illustrates how the mobile phone has the endowed capacity to inform rearrange and transform almost every aspect of Moroccan society      Many Norths Lola Sheppard, Mason

White, 2021-07-13 There are many norths in this North Louis Edmond Hamelin 1975 *Many Norths Spatial Practice in a Polar Territory* charts the unique spatial realities of Canada's Arctic region an immense territory populated with small dispersed communities The region has undergone dramatic transformations in the name of sovereignty aboriginal affairs management resources and trade among others For most of the Arctic's modern history architecture infrastructure and settlements have been the tools of colonialism Today tradition and modernity are intertwined Northerners have demonstrated remarkable adaptation and resilience as powerful climatic social and economic pressures collide This unprecedented book documents through the themes of urbanism architecture mobility monitoring and resources the multiplicity of norths that appear and the spatial practices employed to negotiate it Using innovative drawings maps timelines as well as essays and interviews *Many Norths* reveals a distinct northern vernacular      **Nomadic and Indigenous Spaces** Judith Miggelbrink, Joachim Otto

Habeck, Nuccio Mazzullo, Peter Koch, 2016-05-06 This volume is devoted to aspects of space that have thus far been largely unexplored How space is perceived and cognised has been discussed from different stances but there are few analyses of nomadic approaches to spatiality Nor is there a sufficient number of studies on indigenous interpretations of space despite the importance of territory and place in definitions of indigeneity At the intersection of geography and anthropology the authors of this volume combine general reflections on spatiality with case studies from the Circumpolar North and other

nomadic settings Spatial perceptions and practices have been profoundly transformed by new technologies as well as by new modes of social and political interaction How do these changes play out in the everyday lives identifications and political projects of nomadic and indigenous people This question has been broached from two seemingly divergent stances spatial cognition on the one hand and production of space on the other Bringing these two approaches together this volume re aligns the different strings of scholarship on spatiality making them applicable and relevant for indigenous and nomadic conceptualizations of space place and territory Recreational Land Use Geoffrey Wall, John S. Marsh, 1982-01-01

Grazing Communities Letizia Bindi, 2022-05-13 Pastoralism is a diffused and ancient form of human subsistence and probably one of the most studied by anthropologists at the crossroads between continuities and transformations The present critical discourse on sustainable and responsible development implies a change of practices a huge socio economic transformation and the return of new shepherds and herders in different European regions Transhumance and extensive breeding are revitalized as a potential resource for inner and rural areas of Europe against depopulation and as an efficient form of farming deeply influencing landscape and functioning as a perfect eco system service This book is an occasion to reconsider grazing communities frictions in the new global heritage scenario
