Social Behavior From Fish To Man:

Social Behavior from Fish to Man William Etkin, Daniel G. Freedman, 1964
William Etkin, Daniel G. Freedman, 1989

Ethological Studies of Child Behaviour N. Blurton Jones, 1972-03-09 This 1972 volume contains specially written reports by research workers in zoology psychology and psychiatry applying methods of comparative ethology in studies of human behaviour It is intended as a contrast to popular researches in animal behaviour There has been a considerable increase in the number of descriptive analytical studies of human behaviour concerned principally with the behaviour of children and their mothers and the methods have become widely used The present collection of papers assesses the value of the methods and clarifies the particular contributions which they may make to an understanding of human behaviour The papers cover a range of topics familiar from animal studies non verbal communication mother infant interaction play and aggressive behaviour but also range widely into more usual subjects for developmental psychology cross cultural studies development of skills class differences in mother infant interactions This is essentially a book for research workers teachers and students of behavioural sciences

Social Behavior from Fish to Man William Etkin, 1967 *Bibliography on the Control and Management of the Coyote and Related Canids with Selected References on Animal Physiology, Behaviour, Control Methods and Reproduction* E. H. Dolnick, R. L. Medford, R. J. Schied, 1976

Human Infancy Daniel G. Freedman, 2016-07-07 Originally published in 1974 this volume is primarily devoted to what is known about human infancy from an ethological evolutionary viewpoint Included are discussions of pan specific traits presumably shared by all infants individual genetic variations on these behaviours as judged by twin studies sex differences presumably shared by infants of all ethnic groups and genetically based ethnic differences However the author favours neither biological determinism nor cultural determinism and does not consider interactionism to be a viable solution Instead a monistic position is taken stressing the inseparability of the innate and the acquired of genetics and environment and of biology and culture The heredity environment issue is tackled head on throughout the volume The interaction between the two an implied dualism is described as a statistical abstraction from measured populations while the position here is that heredity and environment are not separable in any single organism In the same vein the author argues that on logical grounds everything one does every cultural act has within it some biological component

Human Paleopsychology K. Bailey, 2013-08-21 First Published in 1986 In this book the author seeks to demonstrate his believe that any credible view must grapple not only with human distinctiveness e g learning capacity language rationality and culture but the dark sides of senseless violence and social disorder as well Any such grappling with the dark side must necessarily confront our animal natures as well as our distinctly human natures

Sexual Selection and the Descent of Man Bernard Campbell, 2017-07-12 Just over one hundred and thirty years ago Charles Darwin in *The Descent of Man and Selection in Relation to Sex* 1871 developed remarkably accurate conclusions about man s ancestry based on a review of

general comparative anatomy and psychology in which he regarded sexual selection as a necessary part of the evolutionary process. But the attention of biologists turned to the more general concept of natural selection in which sexual selection plays a complex role that has been little understood. This volume significantly broadens the scope of modern evolutionary biology by looking at this important and long neglected concept of great importance. In this book which is the first full discussion of sexual selection since 1871 leading biologists bring modern genetic theory and behavior observation to bear on the subject. The distinguished authors consider many aspects of sexual selection in many species including man within the context of contemporary evolutionary theory and research. The result is a remarkably original and well rounded view of the whole concept that will be invaluable especially to students of evolution and human sexual behavior. The lucid authority of the contributors and the importance of the topic will interest all who share in man's perennial fascination with his own history. The book will be of central importance to a wide variety of professionals including biologists, anthropologists and geneticists. It will be an invaluable supplementary text for courses in vertebrate biology, theory of evolution, genetics and physical anthropology. It is especially important with the emergence of alternative explanations of human development under the rubric of creationism and doctrines of intelligent design.

Social Behavior from Fish to Man, Etc. (An Abridgement of "Social Behavior and Organization Among Vertebrates", with a New Chapter by Daniel G. Freedman.) [With Illustrations and a Bibliography.] William ETKIN, Daniel G. FREEDMAN, 1967

The Imperial Animal, 1997-01-01

The Imperial Animal offers a compelling perspective on the controversy over humans and their biology. This now classic study is about the social bonds that hold us together and the antisocial theories that drive us apart. The authors divulge how the evolutionary past of the species reflected in genetic codes determines our present and coerces our future. In the new introduction Tiger and Fox outline their reasons for originally writing the book as well as the process they used to do their research.
