Hughes, Mansel & Webster's Benign Disorders and Diseases of the Breast R. E. Mansel,David J. T. Webster,2009-01-01 By far the majority of women presenting with a breast complaint will be diagnosed as having a benign rather than malignant condition Despite this clinical and research interest has always favoured breast cancer and few publications have attempted to cover benign breast disorders as an independent entity focusing instead on benign breast disease in relation to breast cancer and none provide the complete and pragmatic coverage found in this text Hughes Mansel and Webster s Benign Disorders and Diseases of the Breast represents the distillation of over 35 years of clinical experience and research in the Cardiff Clinic and is unique in its depth of coverage of the entire spectrum of benign breast complaints The third edition of this critically acclaimed book provides practical and detailed management guidelines Relevant investigations are discussed and clear advice is given for the most effective treatment strategies in each condition including dealing with treatment failures and recurring problems The underlying pathology and physiology are also discussed from the clinician s viewpoint to help understand clinical presentations and response to treatment

Regulatory Mechanisms in Breast Cancer Marc E. Lippman, Robert B. Dickson, 2012-12-06 In Breast Cancer Cellular and Molecular Biology Kluwer Academic Publishers 1988 we tried to present an introduction to the emerging basic studies on steroid receptors oncogenes and growth factors in the regulation of normal and malignant mammary epithelium The response to this volume was superb indicating a tremendous interest in basic growth regulatory mechanisms governing breast cancer and controlling its malignant progression In the two years since its publication much new and exciting information has been published and the full interplay of regulatory mechanisms is now beginning to emerge We have divided this book into four sections that we hope will unify important concepts and help to crystallize areas of consensus and or disagreement among a diverse group of basic and clinical scientists working on the disease The first section is devoted to studies on oncogenes antioncogenes proliferation and tumor prognosis The first chapter by Sunderland and McGuire introduces the characteristics of breast cancer as studied by pathologists to establish prognostic outcome Of particular interest is a new proto oncogene called HER 2 or neu which is rapidly becoming accepted as a valuable new tumor marker of poor prognosis The second chapter by Lee Bookstein and Lee introduces the best known antioncogene the retinoblastoma antioncogene whose expression is sometimes lost in breast cancer Malignant progression appears to be influenced by the balance of proto oncogene and antioncogene expression
