The Caloric Theory Of Gases From Lavoisier To Regnault:

The Caloric Theory of Gases: from Lavoisier to Regnault Robert Fox, 1971 *Energy, Force and Matter* Peter Michael Harman, 1982-04-30 By focusing on the conceptual issues faced by nineteenth century physicists this book clarifies the status of field theory the ether and thermodynamics in the work of the period A remarkably synthetic account of a difficult and fragmentary period in scientific development *Maxwell on Molecules and Gases* James Clerk Maxwell, 1986 *The Thermal Theory of Cyclones* Gisela Kutzbach, 2016-07-29 Gisela Kutzbach has provided an unparalleled account of the mainstream of meteorological thought during the nineteenth and early twentieth centuries This book takes us from the era of attempts to describe disturbances as mechanistic interactions of air currents through Espy's introduction in the 1830s of the proposition that cyclones are convective systems driven by heat of condensation in central rainy areas up to the distinctively different polar front theory of 1920 often considered as the birth of modern meteorology Follies and controversies as well as successes are recounted and in the tale the cast of characters many of them acute observers or experimenters as well as theoreticians and some crusty and dogmatic are brought to life The period was one in which basic concepts of thermodynamics hydrodynamics and energy conversions emerged with parallel accommodations to the special needs of meteorology Influences of the development of synoptic meteorology and early aerology are thoroughly treated essential mathematical expositions are presented in their original forms with explications and theories and analyses are illuminated by numerous well chosen figures and quotations Concise but complete and written in a style easy to comprehend the treatise is a lively account of a lively time in the development of science Kutzbach has succeeded well in her objectives to provide an insight in the particular problems and methods of problem solving in nineteenth century meteorology and to illustrate that science is a human activity and that its development is an open ended process involving the constant testing of hypotheses *Atoms, Mechanics, and Probability* Olivier Darrigol, 2018 A study of Ludwig Boltzmann's oeuvre in early statistical mechanics It is designed to reveal Boltzmann's true endeavors and to give new life to his various theoretical constructions It offers introductory historical and biographical materials detailed summaries and analyses of all the relevant texts **Optics After Newton** G. N. Cantor, 1983 *The Essential Tension* Thomas S. Kuhn, 2024-05-31 Kuhn has the unmistakable address of a man who so far from wanting to score points is anxious above all else to get at the truth of matters Sir Peter Medawar *Nature* *Physics in the Nineteenth Century* Robert D. Purrington, 1997 Putting physics into the historical context of the Industrial Revolution and the European nation state Purrington traces the main figures including Faraday Maxwell Kelvin and Helmholtz as well as their interactions experiments discoveries and debates The success of nineteenth century physics laid the foundation for quantum theory and relativity in the twentieth Robert D Purrington is a professor of physics at Tulane University and coauthor of *Frame of the Universe* *Metaphor and Thought* Andrew Ortony, 1993-11-26 *Metaphor and Thought* first published in 1979 reflects the surge of interest in and research into the

nature and function of metaphor in language and thought In this revised and expanded second edition the editor has invited the contributors to update their original essays to reflect any changes in their thinking Reorganised to accommodate the shifts in central theoretical issues the volume also includes six new chapters that present important and influential fresh ideas about metaphor that have appeared in such fields as the philosophy of language and the philosophy of science linguistics cognitive and clinical psychology education and artificial intelligence *Imre Lakatos and Theories of Scientific Change* K. Gavroglu, Yorgos Goudaroulis, P. Nicolacopoulos, 2012-12-06 How happy it is to recall Imre Lakatos Now fifteen years after his death his intelligence wit generosity are vivid In the Preface to the book of Essays in Memory of Imre Lakatos Boston Studies 39 1976 the editors wrote Lakatos was a man in search of rationality in all of its forms He thought he had found it in the historical development of scientific knowledge yet he also saw rationality endangered everywhere To honor Lakatos is to honor his sharp and aggressive criticism as well as his humane warmth and his quick wit He was a person to love and to struggle with The book before us carries old and new friends of that Lakatosian spirit further into the issues which he wanted to investigate That the new friends include a dozen scientific historical and philosophical scholars from Greece would have pleased Lakatos very much and with an essay from China he would have smiled all the more But the key lies in the quality of these papers and in the imaginative organization of the conference at Thessaloniki in summer 1986 which worked so well
