National Science Foundation Authorization United States. Congress. House. Committee on Science and Technology. Subcommittee on Science, Research, and Technology, 1976 **Research in Education**, 1973 **The Four Streams of the Prefrontal Cortex** Dorit Ben Shalom, Yoram S. Bonne, 2024-12-17 The prefrontal cortex contains Brodmann areas BA8 BA9 BA10 BA11 BA12 BA13 BA14 BA24 BA25 BA32 BA44 BA45 BA46 and BA47 and it is thought to be involved in psychological functions such as executive tasks attention and memory This Research Topic concerns BA8 BA9 BA10 and BA11 only since they are the most rostral and might be involved in more elementary computations as compared to say BA46 which is clearly involved in working memory This region of the brain is often treated as an undifferentiated structure on the one hand or as a mosaic of psychological faculties on the other A third option is to address the landscape of the prefrontal cortex anatomically and functionally based on the premise that structure and function are inextricably related This Research Topic sees itself as a descendant of Goldman-Rakic's horizontal division of the prefrontal cortex into spatial where more output oriented areas in the dorsal prefrontal cortex and object what more input oriented areas in the ventral prefrontal cortex *Introduction to Psychology* Christopher Peterson, 1991 **Sociobiology** Edward O. Wilson, 2000-03-24 When this classic was first published in 1975 it created a new discipline and started a tumultuous round in the nature versus nurture debate In the introduction to this edition Wilson shows how research in human genetics and neuroscience over the past quarter of a century has strengthened the case for a biological understanding of human nature *Resources in Women's Educational Equity*, 1979 **The American Journal of Sociology** Albion W. Small, Ellsworth Faris, Ernest Watson Burgess, 1925 **Experimental models of early exposure to alcohol: a way to unravel the neurobiology of mental retardation** Alberto Granato, Andrea De Giorgio, 2015-01-27 Excessive alcohol drinking represents a major social and public health problem for several countries Alcohol abuse during pregnancy leads to a complex syndrome referred to as fetal alcohol spectrum disorders FASD chiefly characterized by mental retardation The effects of early exposure to ethanol can be reproduced in laboratory animals and this helped to answer several key questions concerning the human pathology The interest of experimental models of FASD is twofold First they increase our knowledge about the dose and modality of alcohol consumption able to induce damaging effects on the developing brain Second experimental models of FASD can provide useful hints to elucidate the basic mechanisms leading to the intellectual disability In fact experimental exposure to alcohol can be carried out during discrete often very restricted time windows As a consequence FASD models though depending on the multifaceted interference of alcohol with several molecular pathways can provide valuable information about which specific developmental periods and brain areas are critically involved in the genesis of mental retardation Putting together data obtained through several experimental paradigms of alcohol exposure and those deriving from other genetic and non-genetic models one can figure out to what extent different types of mental retardation share common pathogenetic mechanisms The present Research Topic is aimed at establishing the state of the art of the current research on experimental

FASD focusing on differences and homologies with other types of intellectual disability The ultimate goal is to find out a common roadmap in view of future therapeutical approaches *Issues in Diabetes, Endocrinology, and Hepatology: 2011 Edition* ,2012-01-09 Issues in Diabetes Endocrinology and Hepatology 2011 Edition is a ScholarlyEditions eBook that delivers timely authoritative and comprehensive information about Diabetes Endocrinology and Hepatology The editors have built Issues in Diabetes Endocrinology and Hepatology 2011 Edition on the vast information databases of ScholarlyNews You can expect the information about Diabetes Endocrinology and Hepatology in this eBook to be deeper than what you can access anywhere else as well as consistently reliable authoritative informed and relevant The content of Issues in Diabetes Endocrinology and Hepatology 2011 Edition has been produced by the world s leading scientists engineers analysts research institutions and companies All of the content is from peer reviewed sources and all of it is written assembled and edited by the editors at ScholarlyEditions and available exclusively from us You now have a source you can cite with authority confidence and credibility More information is available at <http://www.ScholarlyEditions.com>

Iron as Therapeutic Targets in Human Diseases Paolo Arosio,Maura Poli,Raffaella Gozzelino,2020-02-11 Iron is an essential element for almost all organisms a cofactor playing a crucial role in a number of vital functions including oxygen transport DNA synthesis and respiration However its ability to exchange electrons renders excess iron potentially toxic since it is capable of catalyzing the formation of highly poisonous free radicals As a consequence iron homeostasis is tightly controlled by sophisticated mechanisms that have been partially elucidated Because of its biological importance numerous disorders have been recently linked to the deregulation of iron homeostasis which include not only the typical disorders of iron overload and deficiency but also cancer and neurodegenerative diseases This leads iron metabolism to become an interesting therapeutic target for novel pharmacological treatments against these diseases Several therapies are currently under development for hematological disorders while other are being considered for different pathologies The therapeutic targeting under study includes the hepcidin ferroportin axis for the regulation of systemic iron homeostasis complex cytosolic machineries for the regulation of the intracellular iron status and its association with oxidative damage and reagents exploiting proteins of iron metabolism such as ferritin and transferrin receptor A promising potential target is a recently described form of programmed cell death named ferroptosis in which the role of iron is essential but not completely clarified This Special Issue has the aim to summarize the state of the art and the latest findings published in the iron field as well as to elucidate future directions

Causality and Development Gerald Young,2019-02-28 The third book in Young s unique trilogy on causality and development continues to locate and define the central role of causality in biopsychosocial and network systems development and as a unifying concept of psychology itself As a way of discussing causality in general initially the book focuses on the acquisition of handedness and hemispheric specialization in infancy and childhood and their relations to the development of cognition language and emotion in particular The second part of the book elaborates an innovative 25 step Neo Eriksonian

model of development across the life course based on a Neo Piagetian model covered in the previous books completing a step by step account of development over the lifespan cognitively and socio emotionally It builds on the concept of neo stage which is network based From this conceptual synthesis the author s robust theory of development and causality identifies potential areas for psychological problems and pathology at each developmental step as well as science based possibilities for their treatment This elegant volume Presents a clear picture of the development of handedness and laterality in more depth than has been attempted in the literature to date Traces the causal concepts of activation inhibition coordination and networking in the context of development Describes in depth a novel 25 step Neo Eriksonian lifespan model of development Reviews relevant research on Piagetian and Eriksonian theories in development Emphasizes the clinical utility of the described 25 step Neo Eriksonian approach to lifespan development A significant step in understanding this highly nuanced subject and synthesizing a broad knowledge base Causality and Development will find an interested audience among developmental psychologists mental health practitioners academics and researchers chers
