seems that every nosy resident in town has a theory When the sheriff insists Michael check out one of these harebrained theories his surprising discovery sends him on a bewildering search for a mysterious killer that has him questioning everything he has ever believed about life in Hidden Springs Bringing with her a knack for creating settings you want to visit and an uncanny ability to bring characters to life A H Gabhart pens a whodunit that will keep readers guessing **Hidden Springs** Anna Shipton,2024-04-30 Reprint of the original first published in 1881 **Hidden Spring** Thomas N. An excerpt from The Magic Cat of the Hidden Springs Inn and Spa Exit to the Best Holiday Gift of All Accommodations Two big chain hotels both probably booked solid in this storm Steve squinted trying to catch the text on a third logo that promised it was only 0.3 miles away The Hidden Springs Inn and Spa complete with a cartoon image of steaming hot water Steve groaned and closed his eyes for a quick second He didn't care one bit whether that meant a commercial hot tub a hotel bathtub or an actual hot spring He wouldn't mind if the inn cost ten times what any of the chains did He couldn't think of anything he'd rather do than soak this rotten drive away He'd call his parents and break the bad news once he was able to pry his fingers loose from the steering wheel Steve simply couldn't face one more mile in a freak blizzard tonight Please oh please kind sir Tell me you have room at your inn for one more wandering soul tonight

Knowledge as a Feeling Troy A. Swanson, 2023-05-08 Much of information science theory assumes a type of rationality in how individuals process the world around them but the impact of misinformation and disinformation along with the polarization of society into competing information factions calls for new understandings around our relationships to information Advances in neuroscience and psychology shed new light on how the brain processes information using both conscious and unconscious systems Current theory in neuroscience emphasizes that the mind is not a unified whole but a network of networks constructing reality to anticipate needs Knowledge is not a rational process but centers around the feeling of knowing which is the net output of competing brain processes The feeling of knowing assumes a group context and offers a social epistemological stance that judges knowledge within this group context With knowledge built into groups power dynamics allow work to be accomplished but also privilege some group members over others The feeling of knowing has significant implications for information science challenging theoreticians and practitioners to reconsider how individuals process information For information behavior the feeling of knowing offers a fuller picture looking at conscious and unconscious processing in the production of knowledge For information literacy the feeling of knowing sheds light on how individuals evaluate information and synthesize new sources into their existing knowledge Ultimately the feeling of knowing leads us toward new reflective and metacognitive tools that help meet this moment in the evolution of our information ecosystem This book explores the idea that knowing is a feeling that results from the interactions of the brain's unconscious and conscious processes and not through the accumulation of facts It's intended to help librarians educators and information scientists better understand what neuroscience and psychology are teaching about what it means to know and how our brain learns
