The Half Of A Circle:

The Thirteen Books of Euclid's Elements, Tr. from the Text of Heiberg Euclid, 1908 **Sourcebook in the Mathematics of Ancient Greece and the Eastern Mediterranean** Victor J. Katz, 2024-09-17 In recent decades there has been extensive research on Greek mathematics that has considerably enlarged the scope of this area of inquiry. Traditionally, Greek mathematics has referred to the axiomatic work of Archimedes, Apollonius, and others in the first three centuries BCE. However, there is a wide body of mathematical work that appeared in the eastern Mediterranean during the time it was under Greek influence from approximately 400 BCE to 600 CE which remains underexplored in the existing scholarship. This sourcebook provides an updated look at Greek mathematics, bringing together classic Greek texts with material from lesser-known authors as well as newly uncovered texts that have been omitted in previous scholarship. The book adopts a broad scope in defining mathematical practice and as such includes fields such as music, optics, and architecture. It includes important sources written in languages other than Greek in the eastern Mediterranean area during the period from 400 BCE to 600 CE which show some influence from Greek culture. It also includes passages that highlight the important role mathematics played in philosophy, pedagogy, and popular culture. The book is organized topically; chapters include arithmetic, plane geometry, astronomy, and philosophy, literature, and education. Within each chapter, the translated texts are organized chronologically. The book weaves together ancient commentary on classic Greek works with the works themselves to show how the understanding of mathematical ideas changed over the centuries.

Newgrange Speaks for Itself Jacqueline Ingalls Garnett, 2005. Firmly grounded in the structure and engravings of Newgrange, this book offers several revolutionary insights into both its science and its religious faith. Forty carved motifs are explained as emblems of site features which the builders provided to ensure an afterlife for the dead, including the nine carved rungs in the passage, the leak that delivered water to the chamber bowl, and slab, the two round sockets in the rim of the bowl, the stone marbles found in the chamber, and the starry outviews originally possible through the chamber vault. The author argues that some of Michael O'Kelly's discoveries suggest Newgrange may have been retooled when precession displaced the targets of those outviews. The book explores the builders' competent astronomical and mathematical skills and shows how these were combined with an afterlife faith capable of engaging both mind and spirit. A radical analysis of five related motifs exposes unexpectedly sophisticated characteristics of the Newgrangemen's mode of expression. The rich cluster of afterlife agencies identifiable at Newgrange, unique as a fingerprint, can also be recognized in certain myths, fairytales, religious traditions, and superstitious observances. Mrs. Garnett shows how these resources may shed light on the heretofore almost completely unknown afterlife faith and practice of these stone-age people.

Braids, Conformal Module, Entropy, and Gromov's Oka Principle Burglind Jöricke, 2025-01-31. This book studies the relation between conformal invariants and dynamical invariants and their applications, taking the reader on an excursion through a wide range of topics. The conformal invariants called here the conformal modules of conjugacy classes of

elements of the fundamental group were proposed by Gromov in the case of the twice punctured complex plane. They provide obstructions to Gromov's Oka Principle. The invariants of the space of monic polynomials of degree n appeared earlier in relation to Hilbert's 13th Problem and are called the conformal modules of conjugacy classes of braids. Interestingly the conformal module of a conjugacy class of braids is inversely proportional to a popular dynamical invariant the entropy which was studied in connection with Thurston's celebrated theory of surface homeomorphisms. This result proved here for the first time is another instance of the numerous manifestations of the unity of mathematics and it has applications. After prerequisites on Riemann surfaces, braids, mapping classes and elements of Teichmüller theory, a detailed introduction to the entropy of braids and mapping classes is given with thorough, sometimes new, proofs. Estimates are provided of Gromov's conformal invariants of the twice punctured complex plane and it is shown that the upper and lower bounds differ by universal multiplicative constants. These imply estimates of the entropy of any pure three braid and yield quantitative statements on the limitations of Gromov's Oka Principle in the sense of finiteness theorems using conformal invariants which are related to elements of the fundamental group not merely to conjugacy classes. Further applications of the concept of conformal module are discussed. Aimed at graduate students and researchers, the book proposes several research problems.

No one ever understood the mythology and ritual of Ancient Egypt so well as Gerald Massey since the time of the Ancient Philosophers of Egypt. This book is one of the best of its kind and a must have for every student of Egyptian mythology and history. *A Book of the Beginnings* Gerald Massey, 2007-09-01. After enjoying years as a popular journalist and poet, intellectual and freethinker, Gerald Massey turned his vast studies in the field of Egyptology into *A Book of the Beginnings*, a bold statement that the origin of all civilization lays in ancient Egypt. His assertions radical at the time, indeed almost a century before the discovery of three million year old human remains in Africa, resonate loudly today when molecular biology is making corresponding discoveries alongside the still raging creation versus evolution controversy. In Volume II Massey intelligently argues an Egyptian origin for Biblical
