The Military Technical Revolution A Structural Framework Csis Panel Report

N Noddings

The Military Technical Revolution A Structural Framework Csis Panel Report:

The Military Technical Revolution Michael J. Mazarr, Jeffrey Shaffer, Benjamin Ederington, 1993 The new security environment has a number of distinguishing characteristics The formerly dominant bipolar power structure now exists only artificially in the nuclear balance By every measure of usable power economic and political as well as military the world is at a thoroughly multilateral stage albeit with a single and unquestioned lead actor the United States But more and more states in the developing world have the ability to challenge U S and allied military forces a fact demonstrated repeated by Saddam Hussein s Iraq From an intense focus on a single global threat Western defense planning has moved to the more complex and varied task of analyzing and preparing for regional crises and wars involving a kaleidoscopic variety of potential aggressors and victims In part it has done so because such operations may be more likely today than during the cold war when the risk of escalation to superpower war lurked in all regional conflicts This shift demands among other things forces that are more flexible and agile than those deployed during the cold war It also requires better intelligence on the developing world where most immediate military missions lie

Critical Issues In Defense Conversion Harold Brown, Daniel Goure, Debra Van Opstal, 1994-06-09

[The NATO Summit and Beyond](#) CSIS Senior NATO Policy Group, Harold Brown, Alexander Meigs Haig, 1994

Security, Strategy and Military Change in the 21st Century Jo Inge Bekkevold, Ian Bowers, Michael Raska, 2015-05-22 This edited volume explores and analyses strategic thinking military reform and adaptation in an era of Asian growth European austerity and US rebalancing A significant shift in policy strategy and military affairs is underway in both Asia and Europe with the former gaining increasing prominence in the domain of global security At the same time the world s powers are now faced with an array of diverse challenges The resurgence of great power politics in both Europe and Asia along with the long term threats of terrorism piracy and sustained geopolitical instability has placed great strain on militaries and security institutions operating with constrained budgets and wary public support The volume covers a wide range of case studies including the transformation of China s military in the 21st century the internal and external challenges facing India Russia s military modernization program and the USA s reassessment of its strategic interests In doing so the book provides the reader with the opportunity to conceptualize how strategic thinking military reform operational adaptation and technological integration have interacted with the challenges outlined above With contributions by leading scholars and practitioners from Europe and Asia this book provides a valuable contribution to the understanding of strategic and operational thinking and adjustment across the world This book will be of much interest to students of military and strategic studies security studies defence studies Asian politics Russian politics US foreign policy and IR in general

Technology and the American Way of War Since 1945 Thomas G. Mahnken, 2010-06-24 No nation in recent history has placed greater emphasis on the role of technology in planning and waging war than the United States In World War II the wholesale mobilization of American science and technology culminated in the detonation of the atomic bomb Competition with the

Soviet Union during the Cold War combined with the U S Navy s culture of distributed command and the rapid growth of information technology spawned the concept of network centric warfare And America s post Cold War conflicts in Iraq the former Yugoslavia and Afghanistan have highlighted America s edge From the atom bomb to the spy satellites of the Cold War the strategic limitations of the Vietnam War and the technological triumphs of the Gulf war Thomas G Mahnken follows the development and integration of new technologies into the military and emphasizes their influence on the organization mission and culture of the armed services In some cases advancements in technology have forced different branches of the military to develop competing or superior weaponry but more often than not the armed services have molded technology to suit their own purposes remaining resilient in the face of technological challenges Mahnken concludes with an examination of the reemergence of the traditional American way of war which uses massive force to engage the enemy Tying together six decades of debate concerning U S military affairs he discusses how the armed forces might exploit the unique opportunities of the information revolution in the future
