Christof Sommitsch, 2021-08-16 This book deals with metal processing and its numerical modelling and simulation. In total 21 papers from different distinguished authors have been compiled in this area. Various processes are addressed including solidification, TIG welding, additive manufacturing, hot and cold rolling, deep drawing, pipe deformation and galvanizing. Material models are developed at different length scales from atomistic simulation to finite element analysis in order to describe the evolution and behavior of materials during thermal and thermomechanical treatment. Materials under consideration are carbon, Q ductile iron and aluminum, nickel based and titanium alloys. The developed models and simulations shall help to predict structure evolution, damage and service behavior of advanced materials.

High-Performance Ferrous Alloys Radhakanta Rana, 2020-12-18 The current state of understanding of emerging iron alloys and high alloy ferrous systems in comparison with some conventional steels is compiled in this single volume to further their development. While most of the conventional steels are produced routinely today, many advanced high strength steels and iron based alloys are still in the laboratory stage. The iron based emerging alloys can yield high levels of mechanical and physical properties due to their new alloy concepts and novel microstructures leading to multiple benefits of their use in terms of sustainability and environmental impact. This book contains introductory chapters that present the requisite background knowledge on thermodynamics, phase diagrams and processing routes used for the ferrous alloys to enable the readers a smooth understanding of the main chapters. Then an overview of the conventional microalloyed steels and advanced high strength steels is given to present the benchmark of the existing steels and ferrous alloys manifesting their current state of the art in terms of physical metallurgy and engineering applications. Subsequent chapters detail novel emerging ferrous alloys and high alloy ferrous systems. Summarizes the state of the art of emerging iron based alloys and the new processing and physical metallurgy related developments of high alloy iron systems. Explores new iron based systems driven by the need for new properties, enhanced performance, sustainable processes and reduced environmental impact. Compiles cutting edge research on the progress of materials science of iron based systems from physical metallurgy to engineering applications and possible avenues for future research.
