Tall Buildings Mehmet Halis Günel, Hüseyin Emre Ilgin, 2014-06-27 The structural challenges of building 800 metres into the sky are substantial and include several factors which do not affect low rise construction This book focusses on these areas specifically to provide the architectural and structural knowledge which must be taken into account in order to design tall buildings successfully In presenting examples of steel reinforced concrete and composite structural systems for such buildings it is shown that wind load has a very important effect on the architectural and structural design The aerodynamic approach to tall buildings is considered in this context as is earthquake induced lateral loading Case studies of some of the world s most iconic buildings illustrated with full colour photographs structural plans and axonometrics will bring to life the design challenges which they presented to architects and structural engineers The Empire State Building the Burj Khalifa Taipei 101 and the HSB Turning Torso are just a few examples of the buildings whose real life specifications are used to explain and illustrate core design principles and their subsequent effect on the finished structure

The Costs of Climate Change Mitigation Innovations
David S-K. Ting, Jacqueline A. Stagner, 2024-04-18 The notion that humanity may be too late to alter climate change could potentially lead to fear and therefore the advocacy of implementing radical strategies and or hastening the execution of certain measures to the extreme There is evidence that extensive and intensive implementation of some climate change solutions can significantly alter the environment and ecosystems in unintended ways For example the microclimate of a field in the proximity and downstream of a closely packed array of wind turbines can be noticeably altered by the modified lower

atmospheric fluxes caused by the turbines which can then negatively affect crop yields Additionally some studies have found that large scale solar fields can result in the modulation of atmospheric circulation leading to changes in regional precipitation The Costs of Climate Change Mitigation Innovations A Pragmatic Outlook provides a forum for discussion on the long term consequences of various climate strategies It promotes our striving toward minimizing the potential negative impact of new interventions by performing objective holistic analyses The bottom line is that we do not want today's solutions to become tomorrow's problems

Form Follows Energy Brian Cody, 2017-10-23 Architecture is energy Lines drawn on paper to represent architectural intentions also imply decades and sometimes centuries of associated energy and material flows Form Follows Energy is about the relationship between energy and the form of our built environment It examines the optimisation of energy flows in building and urban design and the implications for form and configuration It speaks to both architectural and engineering audiences and offers for the first time a truly interdisciplinary overview on the subject explaining the complex relationships between energy and architecture in an easy to follow manner and using simple diagrams to show how energy design strategies can be used to maximize the energy performance of our built environment while at the same time leading to new aesthetic qualities and radically new forms in architecture and urban design Case studies are used to illustrate the theory The books philosophy is based on the guiding principles underlying nearly 30 years work in practice research and teaching It is relatively easy to make something simple seem complicated To make a complex topic seem simple and easily understandable is far more of a challenge and this is the aim of this book

The Skycourt and Skygarden Jason Pomeroy, 2013-11-20 Population increases advances in technology and the continued trend towards inner city migration have transformed the traditional city of spaces into the modern city of objects This has necessitated alternative spatial and technological solutions to replenish those environments that were once so intrinsic to society s day to day interactions and communal activities This book considers skycourts and skygardens as alternative social spaces that form part of a broader multi level urban infrastructure seeking to make good the loss of open space within the built environment Jason Pomeroy begins the discussion with the decline of the public realm and how the semi public realm has been incorporated into a spatial hierarchy that supports the primary figurative spaces on the ground or in their absence creates them in the sky He then considers skycourts and skygardens in terms of the social cultural economic environmental technological and spatial benefits that they provide to the urban habitat Pomeroy concludes by advocating a new hybrid that can harness the social characteristics of the public domain but be placed within buildings as an alternative communal space for the 21st century Using graphics and full colour images throughout the author explores 40 current and forthcoming
