Slow River:

Slow River Nicola Griffith, 1996-08-20 She awoke in an alley to the splash of rain She was naked a foot long gash in her back was still bleeding and her identity implant was gone Lore Van Oesterling had been the daughter of one of the world's most powerful families and now she was nobody and she had to hide Then out of the rain walked Spanner predator and thief who took her in cared for her wound and taught her how to reinvent herself again and again No one could find Lore now not the police not her family and not the kidnappers who had left her in that alley to die She had escaped but the cost of her newfound freedom was crime and deception and she paid it over and over again until she had become someone she loathed Lore had a choice She could stay in the shadows stay with Spanner and risk losing herself forever Or she could leave Spanner and find herself again by becoming someone else stealing the identity implant of a dead woman taking over her life and creating a new future But to start again Lore required Spanner's talents Spanner who needed her and hated her and who always had a price And even as Lore agreed to play Spanner's game one final time she found that there was still the price of being a Van Oesterling to be paid Only by confronting her family her past and her own demons could Lore meld together who she had once been who she had become and the person she intended to be

Water-temperature Effects on Stage-discharge Relations in Large Alluvial Rivers G. B. Fenwick, 1969 Observations in natural rivers as well as experimental laboratory streams indicate that water temperatures significantly affect stream stage discharge relations bed forms and sediment transport rates However various investigators in this field have reached conclusions that appear to be contradictory and the complex phenomena involved are not yet fully understood With a view to clarifying further the water temperature effects indicated by field measurements the Committee on Channel Stabilization canvassed the Division offices of the Corps of Engineers for available historic data on discharge and water temperature measurements in large alluvial rivers The basic data received on the Mississippi Missouri and Arkansas Rivers were analyzed to determine temperature effects on the stage discharge relations at 31 river stages at 18 gaging stations The tabulated basic field data are included in this report Author Stream Ecology and Self Purification Frank R. Spellman, Joanne Drinan, 2001-06-05 This new edition of a very successful standard reference is expanded and fully reworked The book explains and quantifies the processes whereby streams cleanse themselves reducing their pollutant load as a natural process Mechanisms of purification in running waters have always been critical with regard to clearly identified pollution sources Th The Seine River Basin Nicolas Flipo, Pierre Labadie, Laurence Lestel, 2021-01-30 This open access book reviews the water agro food and socio eco system of the Seine River basin 76 000 km² and offers a historical perspective on the river's long term contamination The Seine basin is inhabited by circa 17 million people and is impacted by intensive agricultural practices and industrial activities These pressures have gradually affected its hydrological chemical and ecological functioning leading to a maximum chemical degradation between the 1960s and the 1990s Over the last three decades while major water quality improvements have

been observed new issues e.g. endocrine disruptors microplastics have also emerged The state of the Seine River network from the headwaters to estuary is increasingly controlled by the balance between pressures and social responses This socio ecosystem provides a unique example of the functioning of a territory under heavy anthropogenic pressure during the Anthropocene era The achievements made were possible due to the long term PIREN Seine research program established in 1989 and today part of the French socio ecological research network Zones Ateliers itself part of the international Long term Socio economic and Ecological Research Network LTSER Written by experts in the field the book provides an introduction to the water budget and the territorial metabolism of the Seine basin and studies the trajectories and impact of various pollutants in the Seine River It offers insights into the ecological functioning the integration of agricultural practices the analysis of aquatic organic matter and the evolution of fish assemblages in the Seine basin and also presents research perspectives and approaches to improve the water quality of the Seine River Given its scope it will appeal to environmental managers scientists and policymakers interested in the long term contamination of the Seine River

[Waiting for the End of the World?](#) Christopher M. Gerrard, Paolo Forlin, Peter J. Brown, 2020-09-07 Waiting for the End of the World addresses the archaeological architectural historical and geological evidence for natural disasters in the Middle Ages between the 11th and 16th centuries This volume adopts a fresh interdisciplinary approach to explore the many ways in which environmental hazards affected European populations and in turn how medieval communities coped and responded to short and long term consequences Three sections which focus on geotectonic hazards Part I severe storms and hydrological hazards Part II and biophysical hazards Part III draw together 18 papers of the latest research while additional detail is provided in a catalogue of the 20 most significant disasters to have affected Europe during the period These include earthquakes landslides tsunamis storms floods and outbreaks of infectious diseases Spanning Europe from the British Isles to Italy and from the Canary Islands to Cyprus these contributions will be of interest to earth scientists geographers historians sociologists anthropologists and climatologists but are also relevant to students and non specialist readers interested in medieval archaeology and history as well as those studying human geography and disaster studies Despite a different set of beliefs relating to the natural world and protection against environmental hazards the evidence suggests that medieval communities frequently adopted a surprisingly modern well informed and practically minded outlook
