Social Construction In Context:

Social Construction in Context Kenneth J Gergen, 2001-04-03 This latest book by one of the world's leading protagonists in the field will be welcomed not just by psychologists but by students, academics and professionals interested in social constructionism across a wide range of subjects. Social Construction in Context explores the potentials of social constructionist theory when placed in diverse intellectual and practical contexts. It demonstrates the achievements of social constructionism and what it can now offer various fields of inquiry both academic, professional and applied, given the proliferation of the theory across the social sciences and humanities. First order issues of concern within the academic world: objectivity, truth, power and ideology are now being augmented by widespread developments in practice, therapeutic, pedagogical, organizational and political. This book looks closely at these developments and examines both the positive potentials and limitations of social constructionist theory when applied to a variety of domains. It has been written in an accessible and scholarly manner making it suitable for a wide ranging readership.

Social Construction Kenneth J Gergen, Mary Gergen, 2003-04-03 This reader introduces a number of important viewpoints central to social constructionism and charts the development of social constructionist thought.

The Social Construction of Rationality Onno Bouwmeester, 2017-03-16 There are many different forms of rationality. In current economic discourse the main focus is on instrumental rationality and optimizing while organization scholars, behavioural economists and policy scientists focus more on bounded rationality and satisficing. The interplay with value rationality or expressive rationality is mainly discussed in philosophy and sociology but never in an empirical way. This book shows that not one but three different forms of rationality: subjective, social and instrumental determine the final outcomes of strategic decisions executed by major organizations. Based on an argumentation analysis of six high profile public debates, this book adds nuance to the concept of bounded rationality. The chapters show how it is socially constructed and thus dependent on shared beliefs or knowledge, institutional context and personal interests. Three double case studies investigating the three rationalities illustrate how decision makers and stakeholders discuss the appropriateness of these rationalities for making decisions in different practice contexts. The first touches more on personal concerns like wearing a niqab or looking at obscene art exposed in a public environment, the second investigates debates on improving the rights and position of specific minorities and the third is based on the agreement on instrumental reasons for two kinds of investments but the cost arguments are regarded less relevant when social norms or personal interests are violated. The Social Construction of Rationality is for those who study political economy, economic psychology and public policy as well as economic theory and philosophy.
