Soviet Marxism and Natural Science David Joravsky, 2013-04-15 Originally published in 1961 Russian Marxist philosophy of science originated among men and women who gave their whole lives to rebellion against established authority The original tension within Marxist philosophy between positivism and metaphysics was repressed but not resolved in this first phase of Soviet Marxism In this volume the author correlates the development of ideas with trends in the Cultural Revolution and against this background it is possible to understand why debates over general philosophy gave way to conflicts over specific sciences in the aftermath of the first Five Year Plan and why there was a genuine crisis in Soviet biology **Politics**

Culture, 1861-1917 Alexander Vucinich, 1970 A Stanford University Press classic **Science in Russia and the Soviet Union** Loren R. Graham, 1993 By the 1980s the Soviet scientific establishment had become the largest in the world but very little of its history was known in the West What has been needed for many years in order to fill that gap in our knowledge is a history of Russian and Soviet science written for the educated person who would like to read one book on the subject This book has been written for that reader The history of Russian and Soviet science is a story of remarkable achievements and frustrating failures That history is presented here in a comprehensive form and explained in terms of its social and political context Major sections include the tsarist period the impact of the Russian Revolution the relationship between science and Soviet society and the strengths and weaknesses of individual scientific disciplines The book also discusses the changes brought to science in Russia and other republics by the collapse of communism in the late 1980s and early 1990s

Philosophy and Revolution Raya Dunayevskaya, 2003-01-01 Few thought systems have been as distorted and sometimes misconstrued as those of Marx and Hegel Philosophy and Revolution presented here in a new edition attempts to save Marx from interpretations which restrict the revolutionary significance of the philosophy behind his theory Developing

her breakthrough on Hegel's Absolute Idea Raya Dunayevskaya who died in the June of 1987 aims at a total liberation of the human person not only from the ills of a capitalist society but also from the equally oppressive state capitalism of established communist governments She assumes within her theory of class struggle issues as diverse as feminism black liberation and even the new nationalism of third world countries Moreover Dunayevskaya combines within herself an incorruptible objectivity with a passionate political attitude making this work a vibrant and concrete discussion of the vicissitudes of society justice equality and existence

David Bohm: Causality and Chance, Letters to Three Women Chris Talbot, 2017-04-17 The letters transcribed in this book were written by physicist David Bohm to three close female acquaintances in the period 1950 to 1956 They provide a background to his causal interpretation of quantum mechanics and the Marxist philosophy that inspired his scientific work in quantum theory probability and statistical mechanics In his letters Bohm reveals the ideas that led to his ground breaking book *Causality and Chance in Modern Physics* The political arguments as well as the acute personal problems contained in these letters help to give a rounded human picture of this leading scientist and twentieth century thinker

Revolutionary Dreams Richard Stites, 1991-11-14 The revolutionary ideals of equality communal living proletarian morality and technology worship rooted in Russian utopianism generated a range of social experiments which found expression in the first decade of the Russian revolution in festival symbol science fiction city planning and the arts In this study historian Richard Stites offers a vivid portrayal of revolutionary life and the cultural factors myth ritual cult and symbol that sustained it and describes the principal forms of utopian thinking and experimental impulse Analyzing the inevitable clash between the authoritarian elements in the Bolshevik's vision and the libertarian behavior and aspirations of large segments of the population Stites interprets the pathos of utopian fantasy as the key to the emotional force of the Bolshevik revolution which gave way in the early 1930s to bureaucratic state centralism and a theology of Stalinism

Mathematical Communities in the Reconstruction After the Great War 1918-1928 Laurent Mazliak, Rossana Tazzioli, 2021-03-27 This book is a consequence of the international meeting organized in Marseilles in November 2018 devoted to the aftermath of the Great War for mathematical communities It features selected original research presented at the meeting offering a new perspective on a period the 1920s not extensively considered by historiography After 1918 new countries were created and borders of several others were modified Territories were annexed while some countries lost entire regions These territorial changes bear witness to the massive and varied upheavals with which European societies were confronted in the aftermath of the Great War The reconfiguration of political Europe was accompanied by new alliances and a redistribution of trade commercial intellectual artistic military and so on which largely shaped international life during the interwar period These changes also had an enormous impact on scientific life not only in practice but also in its organization and communication strategies The mathematical sciences which from the late 19th century to the 1920s experienced a deep disciplinary evolution were thus facing a double movement internal and external

which led to a sustainable restructuring of research and teaching Concomitantly various areas such as topology functional analysis abstract algebra logic or probability among others experienced exceptional development This was accompanied by an explosion of new international or national associations of mathematicians with for instance the founding in 1918 of the International Mathematical Union and the controversial creation of the International Research Council Therefore the central idea for the articulation of the various chapters of the book is to present case studies illustrating how in the aftermath of the war many mathematicians had to organize their personal trajectories taking into account the evolution of the political social and scientific environment which had taken place at the end of the conflict *Soviet Studies Guide* Tania Kohn,1992 Critical bibliographic references to core literature on land environment and people Soviet history society and culture government and politics international relations armed forces economy business science and technology and general reference
