Soviets In Space:

Into the Cosmos James T. Andrews, Asif A. Siddiqi, 2011-09-25 The launch of the Sputnik satellite in October 1957 changed the course of human history In the span of a few years Soviets sent the first animal into space the first man and the first woman These events were a direct challenge to the United States and the capitalist model that claimed ownership of scientific aspiration and achievement The success of the space program captured the hopes and dreams of nearly every Soviet citizen and became a critical cultural vehicle in the country's emergence from Stalinism and the devastation of World War II It also proved to be an invaluable tool in a worldwide propaganda campaign for socialism a political system that could now seemingly accomplish anything it set its mind to **Into the Cosmos** shows us the fascinating interplay of Soviet politics science and culture during the Khrushchev era and how the space program became a binding force between these elements The chapters examine the ill fitted use of cosmonauts as propaganda props the manipulation of gender politics after Valentina Tereshkova's flight and the use of public interest in cosmology as a tool for promoting atheism Other chapters explore the dichotomy of promoting the space program while maintaining extreme secrecy over its operations space animals as media darlings the history of Russian space culture and the popularity of space themed memorabilia that celebrated Soviet achievement and planted the seeds of consumerism

Soviets in Space Colin Turbett, 2022-01-12 The victory over Nazi Germany in 1945 in which the Soviet Union played both the greatest part and suffered the greatest losses found the country in a state of devastation Military strength could not compensate for the damage wreaked by war especially in the western areas of the USSR Within just over ten years not only was Stalin dead and the relative freedoms of the Khrushchev Thaw in progress but the Soviet Union was ahead in the Space Race beating the enormous wealth and resources of the USA launching Soviet citizens from ordinary backgrounds quite literally into worlds beyond our own The communist dream seemed alive and well The story of those years has rarely been told from a Soviet perspective Cold War journalism and historical accounts written in the West tend to portray the space race in terms of ideological competition with success and failure mirroring power and influence in a world divided between capitalism and communism Whilst the military on both sides certainly benefited from the cutting edge technological advance of the space programmes for the people of the USSR the prestige of their successes offered proof that real existing socialism was moving mankind onto new levels of peaceful progress Agriculture and railway building initiatives tried to involve ordinary people in other pioneering projects to build socialism before the dream shattered in the 1980s Extensively illustrated with images from the time this book looks at the years of Soviet space success their background the personalities involved and their impact on the ordinary people of the USSR

U.S.-Soviet Cooperation in Space, 1985 **The Soviet Manned Space Programme** Phillip Clark, 1988

Traces the development of the Soviet space program from Sputnik to the Mir space station and looks at future Soviet plans for the exploration of space.

Soviet and Russian Lunar Exploration Brian Harvey, 2007-08-17

When in July 1969 the Americans decisively beat the Soviet Union in the race to put an astronaut on the moon, this event had profound historical, scientific, and political implications. This book tells the story of the Soviet and Russian lunar programme from its origins to the reconsideration of a lunar programme in the present day federal Russian space programme. Following Sputnik, the first Soviet lunar flights achieved the key goals of hitting, circling, and photographing the moon in 1959. The Soviet Union planned to achieve the biggest prize of them all: the first person to land on the moon and build all the key spaceships required to do so, such as a lunar orbiter and lander. Brian Harvey describes the techniques devised by the USSR for lunar landing, from the LK lunar module to the LOK lunar orbiter and tested versions in Earth orbit. He asks whether these systems would have worked and, examining how well they were tested, concludes that they would have. The Soviet Union lost the moon race for political, not technical, reasons. Designs for moon bases were even drawn up. In the end, the Soviet Union ran an impressive series of robotic missions from 1968 to 1976 to circle the moon, map the far side, conduct scientific observations from orbit, recover samples, and rove over the surface. The scientific haul from these missions is surveyed, what was actually learned about the moon, its rocks, and the lunar environment that will be useful for the present plans by the United States to return to the moon and for other countries such as India and China to conduct their own lunar exploration. The book opens in Surgut, Siberia, in August 1976 with a largely forgotten event: the return to Earth after a three-day journey from the moon under a single parachute of the tiny Luna 24 cabin with a core sample drilled deep into the Sea of Crises, a remarkable scientific and engineering achievement. It ends with an examination of projected missions: from plans to explore the far side and set up lunar observatories to the Luna Glob explorer of the 1990s. There is also discussion of lunar tourism using a modernized version of the Zond spacecraft, which flew around the moon from 1968 to 1970.
