Space Sailing:

Solar Sails Giovanni Vulpetti, Les Johnson, Gregory L. Matloff, 2014-11-05 The reality of sunlight based sailing in space began in May 2010 and solar sail technology and science have continued to evolve rapidly through new space missions Using the power of the Sun's light for regular travel propulsion will be the next major leap forward in our journey to other worlds This book is the second edition of the fascinating explanation of solar sails how they work and how they will be used in the exploration of space Updated with 35% new material this second edition includes three new chapters on missions operated by Japan and the US as well as projects that are in progress The remainder of the book describes the heritage of exploration in water borne sailing ships and the evolution to space vehicle propulsion as well as nuclear solar electric nuclear electric and antimatter rocket devices It also discusses various sail systems that may use either sunlight or solar wind and the design fabrication and steering challenges associated with solar sails The first edition was met with overwhelmingly positive reviews and deemed a title that needs to be on your shelf if you're seriously interested in the next step as we move beyond rocketry Centauri Dreams September 2008 Written with a mixed approach this book appeals to both the general public as well as those with a more scientifically technical background

Space Sailing Jerome L. Wright, 1992 Wright was one of the first to introduce the concept of propulsion using light pressure He reports on his continuing work mostly at the Jet Propulsion Laboratory in Pasadena for scientists engineers and space enthusiasts with little technical background The first space sailors are probably in junior high now Printed on acidic paper Annotation copyrighted by Book News Inc Portland OR

Solar Sailing Colin R. McInnes, 2013-11-27 Solar sailing offers the possibility of low cost long distance missions impossible for any other type of conventional spacecraft The book provides a detailed account of solar sailing at a high technical level but in a way accessible to the scientifically informed layman Solar sail orbital dynamics and solar radiation pressure form the foundations of the book but the engineering design of solar sails is also considered along with potential mission applications This book introduces the subject and at the same time provides a technical reference source

Space, the Final Frontier? Giancarlo Genta, Michael Rycroft, 2003-02-13 What are our motivations for going into space Where does our long term space future lie Why and how should we strive to reach if not for the stars at least for the Moon and Mars This exciting book looks first at the progress that has already been made in our attempts to explore and expand beyond the Earth Current and past space technologies and space stations are described and the effects of the space environment on the human body are explained A discussion of the merits of the robotic exploration of space is followed by a look at our exploration of the Moon and Mars Final chapters touch on propulsion methods required for leaving our solar system and ask which of the possibilities for future space travel is most likely to succeed This thought provoking book will appeal to all those with an interest in the future of space exploration

Living Off the Land in Space C. Bangs, Greg Matloff, Les Johnson, 2007-08-24 Human civilization has evolved to the point at which we can consider tapping space resources and expanding beyond Earth's

atmosphere The Introduction surveys possible motivations for large scale human emigration to space Since our early ancestors began to move out of Africa humans have constantly expanded their range Today the pattern of human settlement extends from pole to pole Humans regularly visit the upper troposphere and ocean floor and technology has enabled a few to even reside above the atmosphere in space stations For the next few millennia at least barring breakthroughs the human frontier will include the solar system and the nearest stars Will it better to settle the Moon Mars or a nearby asteroid and what environments can we expect to find in the vicinity of nearby stars are questions that need to be answered if mankind is to migrate into space

Fast Solar Sailing Giovanni Vulpetti,2012-08-10 The range of solar sailing is very vast it is a fully in space means of propulsion that should allow us to accomplish various mission classes that are literally impossible using rocket propulsion no matter if nuclear or electric Fast and very fast solar sailings are special classes of sailcraft missions initially developed only in the first half of the 1990s and still evolving especially after the latest advances in nanotechnology This book describes how to plan compute and optimize the trajectories of sailcraft with speeds considerably higher than 100 km s such sailcraft would be able to explore the outer heliosphere the near interstellar medium and the solar gravitational lens 550 800 astronomical units in times significantly shorter than the span of an average career 35 years just to cite a few examples The scientific interest in this type of exploration is huge

Space Warfare Nordin Yusof,1999

Deep Space Probes Gregory L. Matloff,2006-08-31 The Space Age is nearly 50 years old but exploration of the outer planets and beyond has only just begun Deep Space Probes Second Edition draws on the latest research to explain why we should explore beyond the edge of the Solar System and how we can build highly sophisticated robot spacecraft to make the journey Many technical problems remain to be solved among them propulsion systems to permit far higher velocities and technologies to build vehicles a fraction of the size of today s spacecraft Beyond the range of effective radio control robot vehicles for exploring deep space will need to be intelligent thinking craft able to make vital decisions entirely on their own Gregory Matloff also looks at the possibility for human travel into interstellar space and some of the immense problems that such journeys would entail This second edition includes an entirely new chapter on holographic message plaques for future interstellar probes a NASA funded project

Handbook of Space Resources Viorel Badescu,Kris Zacny,Yoseph Bar-Cohen,2023-04-27 Earth has limited material and energy resources while these resources are virtually unlimited in space It is only a matter of time before planetary resources are mined and used in situ to sustain human and robotic exploration or returned to Earth for commercial gain This book covers a number of aspects related to space resources In particular subjects related to mission concepts exploration approaches mining and extraction technologies commercial potential and regulatory aspects of space resources are covered in detail This book is therefore a good resource for readers who seek background and deeper understanding of space resources related activities

The International Handbook of Space Technology Malcolm Macdonald,Viorel Badescu,2014-07-08 This comprehensive handbook provides an overview of space technology and a holistic

understanding of the system of systems that is a modern spacecraft With a foreword by Elon Musk CEO and CTO of SpaceX and contributions from globally leading agency experts from NASA ESA JAXA and CNES as well as European and North American academics and industrialists this handbook as well as giving an interdisciplinary overview offers through individual self contained chapters more detailed understanding of specific fields ranging through Launch systems structures power thermal communications propulsion and software to entry descent and landing ground segment robotics and data systems to technology management legal and regulatory issues and project management This handbook is an equally invaluable asset to those on a career path towards the space industry as it is to those already within the industry
