National Aeronautics and Space Administration, 1968 *Science Fact and Science Fiction* Brian Stableford, 2006-09-06 Science fiction is a literary genre based on scientific speculation Works of science fiction use the ideas and the vocabulary of all sciences to create valid narratives that explore the future effects of science on events and human beings *Science Fact and Science Fiction* examines in one volume how science has propelled science fiction and to a lesser extent how science fiction has influenced the sciences Although coverage will discuss the science behind the fiction from the Classical Age to the present focus is naturally on the 19th century to the present when the Industrial Revolution and spectacular progress in science and technology triggered an influx of science fiction works speculating on the future As scientific developments alter expectations for the future the literature absorbs uses and adapts such contextual visions The goal of the Encyclopedia is not to present a catalog of sciences and their application in literary fiction but rather to study the ongoing flow and counterflow of influences including how fictional representations of science affect how we view its practice and disciplines Although the main focus is on literature other forms of science fiction including film and video games are explored and because science is an international matter works from non English speaking countries are discussed as needed *Space Exploration and Humanity* American Astronautical Society, 2010-08-23 A complete history of human endeavors in space this book also moves beyond the traditional topics of human spaceflight space technology and space science to include political social cultural and economic issues and also commercial civilian and military applications In two expertly written volumes *Space Exploration and Humanity* A Historical Encyclopedia covers all aspects of space flight in all participating nations ranging from the Cold War era beginnings of the space race to the lunar landings and the Apollo Soyuz mission from the Shuttle disasters and the Hubble telescope to Galileo the Mars Rover and the International Space Station The book moves beyond the traditional topics

Ormrod,Peter Dickens,2017-09-11 Societies have always been formed in a relationship with the rest of the universe With rapid developments in satellite communications and imaging space exploration and tourism military space technology and cosmology itself relationships with outer space are changing These changes have inspired a wave of critical academic work in recent years re examining the history present and future of outer space and the place of humans within it This handbook provides an in depth exploration of major themes relating to society culture and the universe and will inspire and cultivate debate in this exciting and burgeoning area of study for future researchers and theorists Bringing together scholarship from a range of disciplines including geography economics history political science sociology philosophy science and technology studies law cultural astronomy anthropology media studies literature psychosocial studies and art it closely examines how outer space is socially produced experienced perceived and imagined and the significance of this for terrestrial social life **The Mechanics of Wonder** Gary Westfahl,1998-11-01 The Mechanics of Wonder will arouse debate and force the questioning of presuppositions No other book so closely examines the origins and development of the idea of science fiction and it will stand among a small number of crucial texts with which every science fiction scholar or prospective science fiction scholar will have to read Beyond Identities: Human Becomings in Weirding Worlds Jim Dator,2022-08-31 This book is an argument for moving beyond culturally historically ethnically biologically grounded identity as the necessary foundation of an authentic self It highlights examples of people who are attempting to inhabit identities they feel are more appropriate to themselves by deploring the damage done via claims about authentic identity The sole theme of this book is becoming beyond identity We are not fixed human beings but rather

perpetually dynamic human becomings As intelligence is enabled or recognized beyond the merely human we should welcome our continuing evolution from homosapiens sapiens into many varieties of intelligences on Earth and the cosmos This book builds from tiny ripples into a tsunami of examples from conventional identity studies to Confucian human becomings to apotemnophilia to DIY biohacking to cyborgs to artefacts to hiveminds to intelligence in animals plants and fungi from the Holocene through the beginnings of the precarious climate change driven Anthropocene Epoch with hints far beyond and throughout the cosmos From a lifetime of work in future studies anticipation science and space studies the author balances frank tales of his own experiences and beliefs concerning his uncertain and fluid identities with those of others who tell their stories In addition to material from academic and popular sources a few poems further illuminate the scene
