Spatial Representation Problems In Philosophy And Psychology:

Spatial Representation Naomi Eilan, Rosaleen A. McCarthy, Bill Brewer, 1999 Spatial Representation presents original specially written essays by leading psychologists and philosophers on a fascinating set of topics at the intersection of these two disciplines They address such questions as these Do the extraordinary navigational abilities of birds mean that these birds have the same kind of grip on the idea of a spatial world as we do Is there a difference between the way sighted and blind subjects represent the world out there Does the study of brain injured subjects such as blind seers tell us anything about the working of normal spatial consciousness The essays are arranged into five sections each of which reflects a central area of research into spatial cognition and opens with a short introduction by the editors designed to facilitate cross disciplinary reading The volume as a whole offers a rich and compelling expression of the view that to advance our understanding of the way we represent the external world it is necessary to draw on both philosophical and psychological approaches

Spatial Representation Naomi Eilan, Rosaleen A. McCarthy, 1993-01-01 Do the extraordinary navigational abilities of birds mean that these birds have the same kind of grip on the idea of a spatial world as we do Is there a difference between the way sighted and blind subjects represent the world out there Does the study of brain injured subjects such as blind seers tell us anything about the workings of normal spatial consciousness This volume brings together for the first time original papers by leading psychologists and philosophers working on questions in spatial representation A central unifying theme is that progress with understanding the way we represent the external world requires drawing on the resources of both philosophical and psychological approaches to these issues The papers are arranged by topics into five sections each of which reflects a central area of research into spatial cognition The five sections are Frames of reference Intuitive physics Spatial representation in the sensory modalities Action What and where There is also a general introduction and five short introductory essays by the editors designed to facilitate cross disciplinary reading of the papers

The Body and the Self Jose Luis Bermudez, Naomi Eilan, Anthony Marcel, 1998-01-23 The Body and the Self brings together recent work by philosophers and psychologists on the nature of self consciousness the nature of bodily awareness and the relation between the two The central problem addressed is How is our grasp of ourselves as one object among others underpinned by the ways in which we use and represent our bodies The contributors take up such issues as how should we characterize the various distinctive ways we have of being in touch with our own bodies in sensation proprioception and action How exactly does our grip on our bodies as objects connect with our ability to perceive the external environment and with our ability to engage in various forms of social interaction Can any of these ways of representing our bodies affect a bridge between body and self

Spatial Biases in Perception and Cognition Timothy L. Hubbard, 2018-08-23 Our experience of the world is influenced by numerous spatial biases most of which influence us without our being aware of them These biases are related to illusions and asymmetries in

our perception of space relationships between space and other qualities dynamics of moving objects dynamics of scene configuration and dynamics related to perception and action Consideration of these biases provides insight into how we perceive remember and navigate space as well as how we interact with objects and people in space This volume introduces and reviews numerous spatial biases and provides descriptions and examples of each bias The contributors discuss historical and current theories for many biases and for some biases provide new explanatory theories Providing a one stop shop for information on such a key aspect of our experience in the world this volume will interest anyone curious about our understanding of space *Handbook Of Spatial Research Paradigms And Methodologies* Nigel Foreman,Raphael Gillett,2013-01-11 Spatial cognition is a broad field of enquiry emerging from a wide range of disciplines and incorporating a wide variety of paradigms that have been employed with human and animal subjects This volume is part of a two volume handbook reviewing the major paradigms used in each of the contributors research areas This volume considers the issues of neurophysiological aspects of spatial cognition the assessment of cognitive spatial deficits arising from neural damage in humans and animals and the observation of spatial behaviours in animals in their natural habitats This handbook should be of interest to new and old students alike The student new to spatial research can be brought up to speed with a particular range of techniques made aware of the background and pitfalls of particular approaches and directed toward useful sources For seasoned researchers the handbook provides a rapid scan of the available tools that they might wish to consider as alternatives when wishing to answer a particular spatial research problem *Spatial Cognition* Christian Freksa,Christopher Habel,Karl F. Wender,2003-05-20 Research on spatial cognition is a rapidly evolving interdisciplinary enterprise for the study of spatial representations and cognitive spatial processes be they real or abstract human or machine Spatial cognition brings together a variety of search methodologies empirical investigations on human and animal orientation and navigation studies of communicating spatial knowledge using language and graphical or other pictorial means the development of formal models for representing and processing spatial knowledge and computer implementations to solve spatial problems to simulate human or animal orientation and navigation behavior or to reproduce spatial communication patterns These approaches can interact in interesting and useful ways Results from empirical studies call for formal explanations both of the underlying memory structures and of the processes operating upon them we can develop and implement operational computer models obeying the relationships between objects and events described by the formal models we can empirically test the computer models under a variety of conditions and we can compare the results to the results from the human or animal experiments A disagreement between these results can provide useful indications towards the refinement of the models Space in Language and Cognition Stephen C. Levinson,2003-03-20 Languages differ in how they describe space and such differences between languages can be used to explore the relation between language and thought This 2003 book shows that even in a core cognitive domain like spatial thinking language influences how people think

memorize and reason about spatial relations and directions After outlining a typology of spatial coordinate systems in language and cognition it is shown that not all languages use all types and that non linguistic cognition mirrors the systems available in the local language The book reports on collaborative interdisciplinary research involving anthropologists linguists and psychologists conducted in many languages and cultures around the world which establishes this robust correlation The overall results suggest that thinking in the cognitive sciences underestimates the transformative power of language on thinking The book will be of interest to linguists psychologists anthropologists and philosophers and especially to students of spatial cognition

The Senses Fiona Macpherson, 2011-06-09 A Collection of Classic and Contemporary Articles on the Philosophy of the Senses

Constructions in Cognitive Contexts Franziska Günther, 2016-11-07 In what ways are language cognition and perception interrelated Do they influence each other This book casts a fresh light on these questions by putting individual speakers cognitive contexts i e their usage preferences and entrenched patterns of linguistic knowledge into the focus of investigation It presents findings from original experimental research on spatial language use which indicate that these individual specific factors indeed play a central role in determining whether or not differences in the current and or habitual linguistic behaviour of speakers of German and English are systematically correlated with differences in non linguistic behaviour visual attention allocation to and memory for spatial referent scenes These findings form the basis of a new speaker focused usage based model of linguistic relativity which defines language perception cognition effects as a phenomenon which primarily occurs within individual speakers rather than between speakers or speech communities

Adopting the Tune of Expression: An Mental Symphony within **Spatial Representation Problems In Philosophy And Psychology**

In some sort of eaten by screens and the ceaseless chatter of instantaneous transmission, the melodic splendor and emotional symphony created by the written term frequently fade in to the backdrop, eclipsed by the constant sound and interruptions that permeate our lives. Nevertheless, set within the pages of **Spatial Representation Problems In Philosophy And Psychology** a stunning literary treasure filled with raw emotions, lies an immersive symphony waiting to be embraced. Constructed by an outstanding composer of language, that interesting masterpiece conducts readers on a psychological journey, well unraveling the hidden melodies and profound impact resonating within each cautiously constructed phrase. Within the depths of the emotional examination, we will explore the book is main harmonies, analyze its enthralling writing design, and surrender ourselves to the profound resonance that echoes in the depths of readers souls.
