Spin Polarized Quantum Systems, 1980 **Spin polarized quantum systems** Teck K. Lim, 1981 *Spin Polarized Quantum Systems*, 1980 *Spin Polarized Quantum Systems* S. Stringari, Institute for Scientific Interchange, 1989 **Spin Polarized Quantum Systems** S. Stringari, Institute for Scientific Interchange, 1989 *Spin Polarized Quantum Systems* F. Laloë, Centre National de la Recherche Scientifique, Société Française de Physique, 1980 **Spin Polarized Quantum Systems**, 1980 *Progress in Low Temperature Physics*, 2011-08-22 The present volume is largely concerned with helium as the variety of physics encompassed in the thermal magnetic and hydrodynamic properties of liquid and solid helium is considerable it is in many ways a model condensed system Nonequilibrium Many-Body Theory of Quantum Systems Gianluca Stefanucci, Robert van Leeuwen, 2013-03-07 A pedagogical introduction to nonequilibrium theory time dependent phenomena and excited state properties for graduate students and researchers *Nuclear Physics with Polarized Particles* Hans Paetz gen. Schieck, 2011-11-02 The measurement of spin polarization observables in reactions of nuclei and particles is of great utility and advantage when the effects of single spin sub states are to be investigated Indeed the unpolarized differential cross section encompasses the averaging over the spin states of the particles and thus loses details of the interaction process This introductory text combines in a single volume course based lecture notes on spin physics and on polarized ion sources with the aim of providing a concise yet self contained starting point for newcomers to the field as well as for lecturers in search of suitable material for their courses and seminars A significant part of the book is devoted to introducing the formal theory a description of polarization and of nuclear reactions with polarized particles The remainder of the text describes the physical basis of methods and devices necessary to perform experiments with polarized particles and to measure polarization and polarization effects in nuclear reactions The book concludes with a brief review of modern applications in medicine and fusion energy research For reasons of conciseness and of the pedagogical aims of this volume examples are mainly taken from low energy installations such as tandem Van de Graaff laboratories although the emphasis of present research is shifting to medium and high energy nuclear physics Consequently this volume is restricted to describing non relativistic processes and focuses on the energy range from astrophysical energies a few keV to tens of MeV It is further restricted to polarimetry of hadronic particles *Helium Three* L. P. Pitaevskii, W.P. Halperin, 2012-12-02 Introducing the subject of superfluid helium three and polarized liquid helium three this book is devoted to modern problems in many body physics specific to the quantum fluid helium three Relationships between properties of helium three and topics in other fields are established including superconductivity non linear dynamics acoustics and magnetically polarized quantum systems Among the chapters in this collection one finds valuable reference material and original research not published elsewhere Advanced research topics are presented in a pedagogical manner in considerable depth and with appropriate introductory material sufficiently general to be suitable to the non specialist *Colloque International Du C.N.R.S.* Franck Laloë, Centre

national de la recherche scientifique (France), Éditions de Physique, 1980 **Spintronics in Nanoscale Devices** Eric R. Hedin, Yong S. Joe, 2016-04-19 By exploiting the novel properties of quantum dots and nanoscale Aharonov Bohm rings together with the electronic and magnetic properties of various semiconductor materials and graphene researchers have conducted numerous theoretical and computational modeling studies and experimental tests that show promising behavior for spintronics applications Fundamental Properties of Spin-polarized Quantum Systems, 1990 The principle thrust of this research project is to observe Bose Einstein condensation BEC in a gas of spin polarized atomic hydrogen After the stabilization of hydrogen by Silvera and Walraven a decade ago a number of straightforward attempts to Bose condense hydrogen were thwarted by the large recombination rates on the cell surfaces and in the bulk at high densities Currently there are several very promising approaches to BEC and we are intensively developing some of these ideas In addition we continue to carry out research to further develop our understanding of hydrogen interactions as our experience has shown that knowledge of the system parameters is vital for any attempt to achieve BEC Spin Polarized Quantum Systems Centre nationale de la recherche scientifique (France), 1980 *Condensed Matter Theories* Valdir C. Aguilera-Navarro, 2012-12-06 This volume gathers the invited talks of the XIII International Work shop on Condensed Matter Theories which took place in Campos do Jordao near Sao Paulo Brazil August 6 12 1989 It contains contributions in a wide variety of fields including neutral quantum and classical fluids electronic systems composite materials plasmas atoms molecules and nuclei and as this year's workshop reflected the natural preoccupation in materials science with its spectacular prospect for mankind room temperature super conductivity All topics are treated from a common viewpoint that of many body physics whether theoretical or simulational Since the very first workshop held at the prestigious Instituto de Fisica Teorica in Sao Paulo and organized by the same organizer of the 1989 workshop Professor Valdir Casaca Aguilera Navarro the meeting has taken place annually six times in Latin America four in Europe and three in the United States Its principal objective has been to initiate and nurture collaborative research networks of scientists interested in the multidisciplinary aspects of many body theory applied to problems in condensed matter physics Financial as well as moral support is gratefully appreciated by all of the CLAF in Rio the CNPq in Brasilia the FAPESP and the FUNDUNESP in Sao Paulo and the U S Army Research Office in Durham NC USA *Quantum Fluids and Solids-1989* Gary G.
