## PRIMER AND REFERENCE MANUAL

Gerard J. Holzmann

### Master SPIN, the breakthrough tool for improving software reliability

SPIN is the world's most popular, and arguably one of the world's most powerful, tools for detecting software defects in concurrent system designs. Tens of thousands of people have used SPIN since it was first produced almost three years ago. The tool has been applied to everything from the verification of complex real-time systems that is used in telephone exchanges, to the validation of mission-critical software for interplanetary spacecraft.

This is the most comprehensive reference guide to SPIN, written by the principal designer of the tool. It covers the tool's specification language and Promela's foundations, and gives detailed advice on methods for solving the most complex software verification problems.

- Design and verify both abstract and detailed verification models of complex systems software
- Develop a solid understanding of the theory behind logic model checking
- Become an expert user of the SPIN command-line interface, the Spin graphical user interface, and the SpinView editing tool
- Learn the basic theory of image automata, linear temporal logic, depth-first and breadth-first search, search optimization, and model execution from source code

The SPIN software was awarded the prestigious Software System Award by the Association for Computing Machinery (ACM), which previously recognized systems such as UNIX, Smalltalk, RISC/P, and the World Wide Web.

### About the Author

DR. GERARD J. HOLZMANN is the principal designer of the SPIN system. Formerly Director of Computing Principles Research at Bell Laboratories in Murray Hill, NJ, he recently joined Xerox's Palo Alto Research Laboratory in Pasadena, CA, to help set up a new Laboratory for Reliable Software. Holzmann's earlier books include *Design and Validation of Computer Hardware* (Prentice Hall), and *The Early History of Data Networks* (IEEE CS Press).
