Oxford Textbook of Neurorehabilitation Volker Dietz, Nick S. Ward, 2020-05-28 Neurorehabilitation is an expanding field with an increasing clinical impact due to an ageing population During the last 20 years neurorehabilitation has developed from a discipline with little scientific background separated from other medical centers to a medical entity largely based on the principles of evidenced based medicine with strong ties to basic research and clinical neurology Today neurorehabilitation is still a work in progress and treatment standards are not yet established for all aspects of the field There are very few books that address contemporary neurorehabilitation from this perspective This new edition of the Oxford Textbook of Neurorehabilitation provides an understanding of the theoretical underpinnings of the subject as well as a clear perspective on how and why to approach treatment decisions on an individualized basis The book has been thoroughly updated to reflect novel important developments in the field and includes new chapters on vocational rehabilitation self management strategies in neurorehabilitation and music supported therapy in neurorehabilitation This indispensable book will be of great interest to rehabilitation physicians neurologists and allied health care professionals who look after patients requiring neurorehabilitation

Neurological Rehabilitation Michael P. Barnes, David C. Good, 2013-01-10 Neurological Rehabilitation is the latest volume in the definitive Handbook of Clinical Neurology series It is the first time that this increasing important subject has been included in the series and this reflects the growing interest and quality of scientific data on topics around neural recovery and the practical applications of new research The volume will appeal to clinicians from both neurological and rehabilitation backgrounds and contains topics of interest to all members of the multidisciplinary clinical team as well as the neuroscience community The volume is divided into five key sections The first is a summary of current research on neural repair recovery and plasticity The authors have kept the topics readable for a non scientific audience and focused on the aspects of basic neuroscience that should be most relevant to clinical practice The next section covers the basic principles of neurorehabilitation including excellent chapters on learning and skill acquisition outcome measurement and functional neuroimaging The key clinical section comes next and includes updates and reviews on the management of the main neurological disabling physical problems such as spasticity pain sexual functioning and dysphagia Cognitive emotional and behavioural problems are just as important and are covered in the next section with excellent chapters for example on memory and management of executive dysfunction The final part draws the sections on symptom management together by discussing the individual diseases that are most commonly seen in neurorehabilitation and providing an overview of the management of the disability associated with those disorders The volume is a definitive review

of current neurorehabilitation practice and will be valuable to a wide range of clinicians and scientists working in this rapidly developing field A volume in the Handbook of Clinical Neurology series which has an unparalleled reputation as the world's most comprehensive source of information in neurology International list of contributors including the leading workers in the field Describes the advances which have occurred in clinical neurology and the neurosciences their impact on the understanding of neurological disorders and on patient care *Mechanisms of Neuronal Recovery in the Central Nervous System* Luis B.
