David A. Anderton,1981 A chronicle of the events of the Air Force from its earliest days as a balloon unit during the Civil War to its present state plus the development of the various types of planes *Winged Shield, Winged Sword* Office of Air Force History,U.s. Air Force,2015-03-10 The History of the United States Air Force is more than a tribute to the men and women responsible for the advancement of military aviation Individual heroes do emerge air battles are recounted and record setting flights described but the book also deals with the ideas and decisions that have made the U S Air Force the professional military organization it is Activity in the lecture hall and on the flight line in the corridors of government and in aeronautical research facilities and in both peacetime and during wars have helped shape the institution influence its conduct and fix its goals The Air Force continues to serve the country effectively and efficiently because its men and women understand that experience provides the foundation for progress More than any other military organization the U S Air Force searches out and listens to the experience history offers Few problems arise from a void or occur without precedent and while every challenge possesses its unique aspects the perspective of time and the careful consideration of what already has succeeded or failed inevitably improves the effectiveness of today s decisions and the quality of planning for the future History is therefore important to the Air Force the recorded past is a foundation for doctrine policy strategy tactics equipment development organization force structure and virtually every other element of air power This volume published in commemoration of the fiftieth anniversary of the Air Force as an independent service is especially valuable Not only should it

both inspire and enlighten the members of the Air Force it should also serve as a convenient source of information for those outside the service who are interested in the origin growth evolution and application of American air power A Concise History of the U. Hearn, 2008-07-15 From its beginnings in 1907 as the Aeronautical Division of U S Armys Signal Corps which consisted of one officer and two enlisted men the United States Air Force has grown to become the foremost aerial armed force in the world Although they had to fly French and British planes as the fledgling army aeronautical bureaucracy failed to procure any combat worthy American aircraft which arguably did not exist American aviators performed valiantly in World War I with intrepid pilots of the such as Eddie Rickenbacker and Frank Luke leading the way Between the wars all of aviation commercial and military around the world grew by leaps and bounds as the numbers of aircraft in service and their capabilities tremendously increased Although the Army Air Corps as it was known at the time was no better prepared for World War II than the rest of the army it had developed a highly professional corps of experienced officers who would be able to take advantage of the latest American aircraft technology such as the B 17 Flying Fortress and the P 51 Mustang With the end of the war and the creation of an independent armed force in 1947 the United States Air Force leapt into the jet age with such icons as the F 86 Sabre and the remarkable B 52 Stratofortress which soldiers on today more than fifty years after going into service in 1955

and with the youngest of the 744 plane production run being forty years old having been built in 1962 Air Force covers the entire history of the U S Air Force and its development from its beginnings early in the last century to becoming the worlds largest most powerful and most versatile air combat force Special attention is paid to the air forces recent post Vietnam history and an entire chapter is devoted to Americas air force of the future Makers of the United States Air Force Office of Air Force History,U S Air Force,2015-02-26 The fiftieth anniversary of the United States Air Force offers us an opportunity to recognize and appreciate the role that a number of gifted military and aviation pioneers played in shaping the world s only global air and space force This book a joint product of the Air Force History and Museums Program and the Air Force Historical Foundation was first published in 1987 It has proven an indispensable reference work for anyone interested in the history of the service and particularly in the role that key individuals have played in its evolution Many of the individuals profiled in this book are well known to students of air and space power Most had notable combat careers Others were organizers men who shaped the service according to far seeing vision They are a diverse bunch of over achievers many of whom were strongly opinionated even about each other But all of them were dedicated to an ideal to produce a new form of military force a force that would achieve victory in war by exploitation and dominance of the third dimension In this they were totally and uncompromisingly unified a band of brothers who took this vision from the ground and brought it with devastating force to the skies of America s enemies On this the Air Force s Golden Anniversary all Americans owe them our grateful appreciation *United States Air Force History Publications* Air Force History and Museums Program (U.S.),2000

The Final Report and a Tactical History Office of Air Force History,U.s. Air Force,2015-03-06 In December 1918 Maj Gen Mason M Patrick Chief of Air Service American Expeditionary Forces AEF directed his newly appointed Assistant Chief of Staff Col Edgar S Gorrell to prepare a history and final report on U S air activities in Europe during World War I The narratives written and compiled by Gorrell and his staff were submitted by Patrick to Gen John J Pershing Commander in Chief of the AEF They summarized Air Service activities from the arrival of the first airmen in France in the spring of 1917 until the Armistice on November 11 1918 The Final Report was published by the Air Service in an Information Circular in 1921 and by the Army in a multivolume collection of World War I documents in 1948 Although it has been used and cited by a number of historians over the years it deserves to be better known The Office of Air Force History therefore is republishing it so as to reach a wider circle of persons interested in the Great War and the early history of military aviation Another important document produced under Gorrell s supervision as part of the history of the Air Service AEF is a Tactical History written by Lt Col William C Sherman and a group of officers working with him in France at the end of the war Although published in part in an Air Service Information Circular in 1920 Sherman s Tactical History has remained virtually unknown or at least has not had extensive use Since it provides excellent information about the conduct of combat operations it should be of value to persons interested in aerial warfare in the First World War It has been included therefore in this volume with

S. Air Service in World War I - Volume 1 the Final Report and a Tactical History** Maurer Maurer, Office of History, 2012-06-05 This volume is part of a series documenting the history of U S air activities in Europe during World War I The narratives here are published by the Office of Air Force History so as to reach a wider circle of persons interested in the Great War and the early history of military aviation Included in this volume is William C Sherman s tactical History which provides excellent information about the conduct of combat operations *Aviation in the U. S. Army 1919-1939* Office of Air Force History, U.S. Air Force, 2015-02-16 Historians generally agree that the birth of American air power occurred in the two decades between the world wars when airmen in the U S Army and Navy forged the aircraft the organization the cadre of leadership and the doctrines that formed a foundation for the country to win the air war in World War II Nearly every scholarly study of this era focuses on these developments or upon the aircraft of the period very few works describe precisely what the flyers were doing and how they overcame the difficulties they faced in creating air forces In this detailed comprehensive volume Dr Maurer Maurer retired senior historian of the United States Air Force Historical Research Center

fills this void for land based aviation As Dr Maurer explains in his personal note this book grew out of his previous editing of the documents of the American Air Service in World War I He decided to write a descriptive rather than an analytical book taking the vantage point of the Army flyers themselves While policy organization and doctrine form the background they are not addressed or explained explicitly Instead Dr Maurer focuses on men and planes describing in the process how the Army Air Corps came to possess a supporting structure and the nationwide network of airfields He exposes the difficulties encountered in training and organizing tactical units However Dr Maurer does not write solely about problems and setbacks In his capable narrative hands readers cross the country and the continents on the many dramatic record flights with the flyers of the Army Air Corps The value of this book is twofold the wealth of detail Dr Maurer provides about the scope structure and activities of interwar Army aviation and the comprehensive portrait that emerges of a military service struggling with limited resources to develop a new weapon of tremendous destructive potential As such the book fills a gap in the literature and contributes to knowledge about the history of the Army air arm

The United States Army Air Arm, April 1861 to April 1917 Office of Air Force History,U.s. Air Force,2015-03-10 THIS MONOGRAPH written by Mrs Juliette A Hennessy of the USAF Historical Division recounts the development of aviation in the United States Army from April 1861 when the Army first became interested in balloons as a means of observation to April 1917 when America entered World War I The origins and organizations of the Army s air arm are told in detail with particular emphasis

on early air force personnel planes and experiments In the process the monograph traces the early development of what today is The United States Air Force Of necessity the monograph tends strongly toward the chronological variety This is owing to several factors the thinness of aviation activities for most of the long period covered and an equal thinness in records being the principal factors Only a few books which deal with this early period of Army aviation have been written and all of them together do not cover the period This then is the first attempt to put the story into a single volume Because the story of the air arm from April 1917 to the beginning of World War II also has not been fully covered it is expected that the present monograph will be the first of three which when completed will become the basis for a published history of the Army Air Arm 1861 1939 Like other Historical Division studies this history is subject to revision and additional information or suggested corrections will be welcomed

Early Concepts of Military Aviation: the U. S. Air Service in World War I

Office of Office of Air Force History,U. S. Air U.S. Air Force,2015-03-06 There has been a tendency to belittle the work of the U S Air Service in World War I while singing the praises of heroes like Rickenbacker and Luke Compared with the bombing of the U S Eighth Air Force in World War II or the B 52 s in Southeast Asia the 138 tons of bombs dropped by the U S Air Service in France in 1918 may seem almost too insignificant to mention Any such comparison however should not lead to a conclusion that World War I was of little importance in the overall history of the U S Air Force The U S Air Service should be viewed in relationship to its own age World War I was fought when aviation was still young The first ace of the U S Air Service won his victories in a French plane that had a top speed of about 125 miles per hour and a tendency to shed the fabric of its upper wing in a dive The American produced DH 4 used by the 1st Day Bombardment Group usually carried about 220 pounds of bombs for a mission which meant a lot of sorties to deliver 138 tons of bombs Aviation technology was not always equal to the tasks to be performed A major goal of the U S Air Service one not attained during the war was the development of a bomber force capable of hitting strategic objectives in Germany Targeting for the strategic campaign involved the identification of a few indispensable targets without which Germany cannot carry on the war an idea that would be used years later against Hitler and the Third Reich Interdiction close air support and some other types of missions carried out by the U S Army Air Forces in World War II and by the U S Air Force at later times had already been tried by the U S Air Service Some documents illustrating various concepts and ideas for the employment of the U S Air Service in World War I have been selected for publication in this volume one of a series being published by the Office of Air Force History
