The Macroeconomy Private Choices Public Actions And Aggregate Outcomes

James R. Hasselback

The Macroeconomy Private Choices Public Actions And Aggregate Outcomes:

The Macroeconomy Michael B. McElroy, 1996 By addressing the interests needs and abilities of readers this practical book prepares readers for a lifetime of macroeconomic issues that will arise in their multiple roles of consumer business decision maker voter and opinion leader The goal of the book is to help readers reach a basic understanding of macroeconomics issues that will not evaporate soon after comprehension but will become a part of an economic common sense to be drawn upon throughout their lives KEY TOPICS Reverses the traditional structure of economics books by developing a substantive analytical structure from the very start and immediately reinforcing it with applications

A Mathematical Treatment of Economic Cooperation and Competition Among Nations, with Nigeria, USA, UK, China, and the Middle East Examples Ethelbert N. Chukwu, 2005-09-30 The book presents a careful mathematical study of Economic Cooperation and Competition among Nations It appropriates the principles of Supply and Demand and of Rational Expectations to build the dynamic model of the Gross Domestic Products of two groups of nations which are linked up together The first group consists of Nigeria the US the UK and China The second group is made up of Egypt the US Jordan and Israel The link connecting the four nations of each group is mirrored in the net export function which is broadened to include trade debts and the inflow or the outflow of wealth from the competing and cooperating nations This realistic models of the four interacting GDP s a hereditary differential game of pursuit are validated with historical data from International Financial Statistic Year Book The Mathematical model is then studied for controllability from a current initial GDPs a better state can be attained using government and private strategies which are carefully identified We use regression and differential equation methods to test whether the four countries are competing or cooperating The consequences of competition or cooperation are explored Cooperation can be realized and the growth of wealth assured because the system is controllable and we can increase the growth of GDP and then increase the coefficient of cooperation The outcome may be unbounded growth of wealth for all concerned the triumph of cooperation With analogous simple examples the book shows that sufficiently cooperating systems grow unbounded and competing ones are either bounded at best or become extinct in finite time If competition is small i e limited or regulated the GDP s need not be extinct even after a long time This results are in contrast with popular opinion which advocate competition over cooperation The detailed policy implication of the cooperation analysis at one time or the other were advocated by Pope John Paul II President Clinton and President Bush The mathematical message is clear the strategy of cooperation is the best way in an Interconnected World Cooperation triumphs over competition The same type of analysis allows the book to argue through modeling that prosperity internal peace and harmony can flourish in Nigeria among the old three regions and the newer six geopolitical regions The same is true for the four powerful states in the Middle East Thus the author s refreshing approach is the scientific treatment of cooperation and competition models of the gross domestic product of two groups of nations Nigeria the USA the UK and China and the USA

Egypt Jordan and Israel Attempts are made to provide scientific answers to broad national policies It allows predictions of growth to be made with some degree of accuracy for up to 4 years MATLAB and Maple programs in accompanied CD are provided The author s individual nations economic models are cited The dynamics are ordinary and hereditary games of pursuit also cited from the original earlier writings of the author are models of the economic state of each nation a vector of six things the gross domestic product GDP y interest rate R employment or unemployment L value of capital stock k prices p t and therefore inflation and cumulative balance of payment E Each economic state is isolated except the impact of export function on aggregate demand The main difference between this earlier contributions and this book is the link and its apparent policy implications and consequences Key features

Optimal Control of the Growth of Wealth of Nations

E.N. Chukwu,2003-01-23 Students and researchers in applied mathematics and applied economics can use this introductory level graduate text It looks at the current problems of the development of the global economy by studying the dynamics of key economic variables such as gross national product interest rates employment value of capital stock prices inflation and balance of payments Validation of the model is attempted using the economic time series of several countries The constructed models explain the macroeconomic data of nations as dynamic games of pursuit which are equivalent to control problems and are used to study mathematical optimal control of the growth of the wealth of nations This invaluable reference for graduates and researchers compares the extent of government intervention in the economy with private firms to ensure the controllability of the economy

Differential Models and Neutral Systems for Controlling the Wealth of Nations

Ethelbert N. Chukwu,2001 This monograph derives from familiar economic principles the dynamics of national income the interest rate employment the value of capital stock prices and the cumulative balance of payments This is a Volterra neutral integrodifferential game of pursuit The quarry control is government intervention in the form of taxation control of money supply tariffs foreign credit interest equalization tax preferential trade agreements which reduce trade barriers and enhance trade flows between nations transportation and distance between trading partners The pursuer controls include wages and productivity The book provides conditions for controllability and then deduces how big government intervention compared with private firms contributions should be to ensure the possibility of growth The reader is assumed to be familiar with advanced calculus and to have a working knowledge of ordinary differential equations The required theory of hereditary systems can be obtained from the book itself The American Economic Review ,1995 Includes annual List of doctoral dissertations in political economy in progress in American universities and colleges Journal of Economic Literature ,1996

Information Choice in Macroeconomics and Finance Laura Veldkamp,2023-03-07 An authoritative graduate

textbook on information choice an exciting frontier of research in economics and finance Most theories in economics and finance predict what people will do given what they know about the world around them But what do people know about their environments The study of information choice seeks to answer this question explaining why economic players know what

they know and how the information they have affects collective outcomes Instead of assuming what people do or don't know information choice asks what people would choose to know Then it predicts what given that information they would choose to do In this textbook Laura Veldkamp introduces graduate students in economics and finance to this important new research The book illustrates how information choice is used to answer questions in monetary economics portfolio choice theory business cycle theory international finance asset pricing and other areas It shows how to build and test applied theory models with information frictions And it covers recent work on topics such as rational inattention information markets and strategic games with heterogeneous information Illustrates how information choice is used to answer questions in monetary economics portfolio choice theory business cycle theory international finance asset pricing and other areas Teaches how to build and test applied theory models with information frictions Covers recent research on topics such as rational inattention information markets and strategic games with heterogeneous information
