The Management Science System:

Some Developments in Management Science and Information Systems with Respect to Measurement in Accounting Carnegie Institute of Technology. School of Industrial Administration, Neil Churchill, Andrew Stedry, 1965 Developing techniques in management science behavioral science and information systems are discussed in the context of accounting measurement Data requirements for implementation of the new planning and control techniques are considered and compared with data furnished by accounting reports Input data and aggregation in contemporary information systems are compared with recording and classification in conventional accounting systems It is proposed that accounting measurement principles be developed for data in micro units much smaller than the transaction which serve as data inputs in on line real time information systems It is also proposed that accounting measurement principles be extended to include non monetary units and in particular to evaluating the measurement procedures used in determining the macro units much larger than the transaction which serve as inputs for planning and control techniques developed in the management and behavioral sciences

Author *Systems and Decision Making* Hans G. Daellenbach, 1994-10-11 *Systems and Decision Making A Management Science Approach* Hans G Daellenbach University of Canterbury Christchurch New Zealand Traditional methods of problem solving based on the cause and effect model can no longer cope with the complex situations in which decisions have to be made today These problem situations occur within a systems context Most of these systems are created and controlled by humans and it is therefore important that decision making is guided by a systematic and comprehensive methodology that helps the decision maker to make effective use of his her extensive but limited powers of reasoning *Systems and Decision Making* combines contemporary systems work with Operations Research OR Daellenbach places an emphasis on developing a methodology for decision situations that lend themselves to quantitative approaches rather than give an elementary survey of many OR MS techniques It incorporates some of the learnings of soft systems methodology for more practical problem solving particularly at the problem identification and formulation stages The text also shows that the scientific component of modelling can be considerably enhanced by the use of various diagrammatic devices The second part of the book studies a number of topics important for the analyst such as how to deal with the time element with constraints with uncertainty and with multiple goals These are demonstrated by various OR MS techniques *Systems and Decision Making* is an excellent core text for undergraduate and graduate students of systems management science and MBA courses
