Cumulated Index Medicus, 1980 **Carbohydrate Chemistry** R J Ferrier, 2007-10-31 Carbohydrate Chemistry provides review coverage of all publications relevant to the chemistry of monosaccharides and oligosaccharides in a given year. The amount of research in this field appearing in the organic chemical literature is increasing because of the enhanced importance of the subject especially in areas of medicinal chemistry and biology. In no part of the field is this more apparent than in the synthesis of oligosaccharides required by scientists working in glycobiology. Glycomedicinal chemistry and its reliance on carbohydrate synthesis is now very well established for example by the preparation of specific carbohydrate based antigens especially cancer specific oligosaccharides and glycoconjugates. Coverage of topics such as nucleosides, amino sugars, alditols and cyclitols also covers much research of relevance to biological and medicinal chemistry. Each volume of the series brings together references to all published work in given areas of the subject and serves as a comprehensive database for the active research chemist. Specialist Periodical Reports provide systematic and detailed review coverage in major areas of chemical research. Compiled by teams of leading authorities in the relevant subject areas, the series creates a unique service for the active research chemist with regular in depth accounts of progress in particular fields of chemistry. Subject coverage within different volumes of a given title is similar and publication is on an annual or biennial basis. **Fe-S Cluster Enzymes Part B**, 2018-01-20 Methods in Enzymology Volume 599 is the second of two volumes focused on Fe S cluster enzymes. Topics of interest in this new release include steps towards understanding mitochondrial Fe S cluster biogenesis, iron sulfur clusters in zinc finger proteins, electrochemistry of Iron sulfur enzymes, NRVS for Fe in biology and its experiment and basic interpretation methods for studying iron regulatory protein 1, an important protein in human iron metabolism, the characterization of glutaredoxin Fe S cluster binding interactions using circular dichroism spectroscopy, fluorescent reporters to track Fe S cluster assembly and transfer reactions, methods for studying the Fe S cluster containing base excision repair glycosylase MUTYH and more. Contain contributions from leading authorities on enzymology. Informs and updates on all the latest developments in the field. **Biomarker** Ghousia Begum, 2018-09-05 This book investigates the emerging use of biomarkers as a diagnostic tool for the identification of patients with an abnormal condition or as a tool for staging the extent of disease as an indicator of disease prognosis. Chapters in Part I focus on biomarkers for cancer including breast cancer and pancreatic cancer as well as circulating microRNA profiling in cancer biomarker discovery. Chapters in Part II focus on biomarkers of other diagnoses, diseases including sepsis, childhood renal diseases, pulmonary diseases, Alzheimer's, leishmaniasis and heart failure. This book investigates the emerging use of biomarkers as a diagnostic tool for the identification of patients with an abnormal condition or as a tool for staging the extent of disease as an indicator of diseases prognosis. The book is of considerable importance for a broad range of people including researchers, clinicians and university students. **Cytokines as Players of Neuronal Plasticity and Sensitivity to Environment in Healthy and Pathological Brain**

Silvia Alboni, Laura Maggi, 2016-03-18 It is now accepted that immune molecules are not only present within the brain during pathology but they exert physiological functions in the healthy brain as well. Increasing evidence points to a neuro modulatory role of cytokines and chemokines. Chemotactic cytokines in basal transmission and plasticity processes where signaling between perisynaptic astrocytes, microglia and neurons plays an important role. Nevertheless, the exact mechanisms as to how cytokines and in particular chemokines participate in the molecular and cellular processes thought to subserve memory formation, plasticity processes and responsiveness to environmental stimuli remain to be clarified. Interestingly, in *in vitro* preparations, molecules like TNF, interleukin IL 1, IL 6, CX3CL1, CXCL12, CCL2 and CCL3 are implicated in synaptic formation and scaling in modulation of glutamatergic transmission in plasticity and neurogenesis in particular in the hippocampus. The hippocampus is an extremely plastic structure, one of the main neurogenic niches in the adult brain that exhibits a marked sensitivity to environmental stimuli. Indeed, exposure of mice to environmental enrichment (EE) modifies learning and memory abilities, increasing neurogenesis and neuronal plasticity. Whether exposure to severe stressful experiences diminishes neurotrophic support, impairs neurogenesis, plasticity and cognition in the hippocampus, cytokines play a key role in mediating both positive as well as negative effects of the environment affecting neuronal plasticity also in stress-related pathologies such as depression. It has been reported that mice lacking type 1 receptor for IL 1 display impaired hippocampal memory and LTP that are restored by EE; moreover, negative effects on neuronal plasticity and thus behavior induced by stress exposure can be prevented by blocking IL 1 activity. In addition, mice lacking IL 6 have improved cognitive functions, whereas the absence of microglia-driven CX3CR1 signaling increases hippocampal plasticity and spatial memory, occluding the potentiating effects of EE. However, the factors mediating the effect of environmental stimuli on behavior and plasticity have been only partially identified. Interestingly, it has been suggested that chemokines can play a key role in the flexibility of hippocampal structure and may modulate neuronal signaling during behavior. The question is how cytokines may translate environmental stimuli in plasticity and behavioral changes. This research topic is proposed to explore the role of cytokines and more in particular chemokines in the modulation of neuronal activity as a fundamental step for the correct brain wiring function and susceptibility to environment. We encourage the submission of original research reports, review articles, commentaries, perspectives or short communications in the following, but not limited to, topics: Role of cytokines and chemokines in neuronal plasticity; Immune molecules and responsiveness to environment; Role of chemokine in the flexibility of hippocampal structure.
