It describes in depth its average model, the operating principles, as well as a new control method and a hybrid modulation strategy that help to exploit the benefits of the interleaving scheme. The new power converter is particularly advantageous for high current applications that require superb quality of input/output waveforms. Moreover, this book reports on a systematic study of the current balancing problem between parallel connected units that commutate in non-simultaneous fashion. This is a typical issue in interleaved converters; however, here it is analyzed for the first time in relation to MMC-based structures. Two control strategies are proposed to cope with this matter. By using a sensorless regulation scheme, the number of required current transducers has been minimized, reducing complexity, cost, and footprint of the hardware while providing the converter with a fast and accurate current balancing. This book also offers a comprehensive comparison between several practical designs of ISM-MMC and classical MMC for an ultra-fast electrical vehicle charger. All in all, it provides graduate students and researchers, as well as field engineers and professionals, with extensive information and essential practical details on the state-of-the-art MMC and ISM-MMC design. *Scientific and Technical Aerospace Reports*, 1994 **Digital Public Administration and E-Government in Developing Nations: Policy and Practice** Halpin, Edward Francis, Griffin, David, Rankin, Carolynn, Dissanayake, Lakshman, Mahtab, Nazmunnessa, 2013-03-31 In recent years, it has become apparent that there are very distinct gaps between developed and developing regions in the world, especially in regards to e-government systems, infrastructures, and processes. *Digital Public Administration and E-Government in Developing Nations: Policy and Practice* examines e-government from the perspective of developing nations and addresses issues and concerns of developing systems.
