Complex Artificial Environments Juval Portugali,2006-01-19 Juval Portugali The notion of complex artificial environments CAE refers to theories of complexity and self organization as well as to artifacts in general and to artificial environments such as cities in particular The link between the two however is not trivial For one thing the theories of complexity and self organization originated in the hard science and by reference to natural phenomena in physics and biology The study of artifacts per contra has traditionally been the business of the soft disciplines in the humanities and social sciences The notion of complex artificial environments thus implies the supposition that the theories of complexity and self organization together with the mathematical formalisms and methodologies developed for their study apply beyond the domain of nature Such a position raises a whole set of questions relating to the nature of 21 century cities and urbanism to philosophical issues regarding the natural versus the artificial to the methodological legitimacy of interdisciplinary transfer of theories and methodologies and to the implications that entail the use of sophisticated state of the art artifacts such as virtual reality VR cities and environments

The three day workshop on the study of complex artificial environments that took place on the island of San Servolo Venice during April 1 3 2004 was a gathering of scholars engaged in the study of the various aspects of CAE **Socio-Cognitive and Affective Computing** Antonio Fernández-Caballero,Pascual González,Máira Teresa López,Elena Navarro,2018-09-21

This book is a printed edition of the Special Issue Socio Cognitive and Affective Computing that was published in Applied Sciences *Handbook of Graphs and Networks* Stefan Bornholdt,Heinz Georg Schuster,2006-03-06 Complex interacting networks are observed in systems from such diverse areas as physics biology economics ecology and computer science For example economic or social interactions often organize themselves in complex network structures Similar phenomena are observed in traffic flow and in communication networks as the internet In current problems of the Biosciences prominent examples are protein networks in the living cell as well as molecular networks in the genome On larger scales one finds networks of cells as in neural networks up to the scale of organisms in ecological food webs This book defines the field of complex interacting networks in its infancy and presents the dynamics of networks and their structure as a key concept across disciplines The contributions present common underlying principles of network dynamics and their theoretical description and are of interest to specialists as well as to the non specialized reader looking for an introduction to this new exciting field Theoretical concepts include modeling networks as dynamical systems with numerical methods and new graph theoretical methods but also focus on networks that change their topology as in morphogenesis and self organization The authors offer concepts to model network structures and dynamics focussing on approaches applicable across disciplines
