Growing Fungus N.A. Gow, Geoffrey M. Gadd, 2007-08-28 This book is about the growth and differentiation processes underlying the growth and differentiation of filamentous fungi The impetus for this work stems from our perception that the coverage of adequate source references for further information this highly diverse and important group of organisms It is estimated conservatively that there are more species than 1.5 million species of fungi more than five many significant advances in our understanding of times the number of vascular plants and second the underlying mechanisms of growth This situ only in diversity to the insects The extreme contrast with the treatment of *Saccharomyces* diversity of form in the fungi has always been a *Cerevisiae* for example which because of its ideal source of inspiration for mycologists This book is properties for genetic analyses has established concerned mainly with those systems that have itself as the model eukaryote for the analysis of the been well characterized from the biochemical cell cycle and basic studies of biochemical and physiological or genetic points of view Although genetic regulation This book does not deal with it has not been possible to illustrate the breadth of the detailed growth physiology of *S.*

Advances in Microbial Physiology, 1989-12-14 Advances in Microbial Physiology *Lipids and Biomembranes of Eukaryotic*

Microorganisms Joseph Erwin, 2012-12-02 Lipids and Biomembranes of Eukaryotic Microorganisms synthesizes the state of knowledge for eukaryotic microorganisms and relates this knowledge to microbial membranes This book examines each of the major classes of lipids sterols fatty acids phospholipids and sulfolipids separately In each case an attempt has been made to provide a comprehensive summary and to evaluate critically the literature on the occurrence and biosynthesis of these

compounds in yeasts fungi algae and protozoa Physiological functions of these lipids particularly their role in the membranes of the organisms are described In some cases attention has been called to the possible usefulness of lipids as taxonomic criteria Experimental systems for studying the relation between the structure of lipids and their function in biomembranes are also discussed These systems include the photosynthetic membranes in organisms such as Euglena Chlorella and Chlamydomonas in which the formation of the chloroplasts is susceptible to experimental control and fatty acid auxotrophic mutants of yeasts and Neurospora in which the fatty acid composition of the membrane lipids can be altered by the experimenter This book will be of use to lipid biochemists microbial physiologists taxonomists and cell biologists who are interested in the molecular aspects of biomembranes
