Barth, 2013-03-09 Spiders are wonderful creatures Their varied and complex range of behavior and highly developed sensory systems are excellently adapted to the environmental conditions as is proven by their evolutionary success Over 400 million years spiders have developed their sensory organs to a fascinating technical perfection and complexity In his intriguing book Professor Friedrich G Barth puts this technical perfection into the context of biology in which the interaction between environment and sensory organs and the selectivity of the senses as a link between environment and behavior play a major role **Spider's Land** A. explaining everything from the cause of our fears to friendship to the autistic and normal personality This new model provides a twist in the tale There isn't one normal personality there are two The autistic personality is one of them the normal personality is the other Original and Tribal Minds is essential reading for anybody that really wants to understand the autistic personality It is essential reading for anybody interested in seeing psychology in a new light Semi-Terrestrial Three Spiders Philip S. Worldwide Wolfgang Nentwig, Jutta Ansorg, Paula E. Cushing, Yvonne Kranz-Baltensperger, Christian Kropf, 2025-01-03 To avoid any misunderstandings this book is not about spiders as pets but about those spiders that live in our houses and apartments as lodgers. Mostly ignored and sometimes wrongly feared, there is hardly a building in the world that does not harbour some species of spider. What is fascinating is that we always find the same species. These spiders must have special adaptations because the humidity in our homes is far too low, they are too clean and the food supply is usually scarce. However, those spiders that have made the leap into our four walls are rewarded with a worldwide right to stay. This in turn is due to people's eagerness to trade and migrate worldwide. Humans tirelessly transport their belongings and an endless stream of goods around the world in sacks, parcels and containers. And our domestic spiders as stowaways travel just as tirelessly and unrecognized. It is therefore possible to present domestic spiders found throughout the world in a single book as they are essentially the same everywhere. The 50 or so most important species and species groups are presented here in a generally understandable way with a detailed profile, photos and distribution maps. The authors of this book are experts who work at museums, universities and in administration in Europe and North America. They are not only recognized scientists but have also been avowed spider fans for decades.
