Measurements in Biological Systems by EPR Lawrence J. Berliner, Sandra S. Eaton, Gareth R. Eaton, 2006-02-20 Distance measurements in biological systems by EPR The foundation for understanding function and dynamics of biological systems is knowledge of their structure Many experimental methodologies are used for determination of structure each with special utility Volumes in this series on Biological Magnetic Resonance emphasize the methods that involve magnetic resonance This volume seeks to provide a critical evaluation of EPR methods for determining the distances between two unpaired electrons The editors invited the authors to make this a very practical book with specific numerical examples of how experimental data is worked up to produce a distance estimate and realistic assessments of uncertainties and of the range of applicability along with examples of the power of the technique to answer biological problems The first chapter is an overview by two of the editors of EPR methods to determine distances with a focus on the range of applicability The next chapter also by the Batons reviews what is known about electron spin relaxation times that are needed in estimating distances between spins or in selecting appropriate temperatures for particular experiments Albert Beth and Eric Hustedt describe the information about spin spin interaction that one can obtain by simulating CW EPR line shapes of nitroxyl radicals The information in fluid solution CW EPR spectra of dual spin labeled proteins is illustrated by Hassane Mchaourab and Eduardo Perozo     EPR and Advanced EPR Studies of Biological Systems Larry R. Dalton, 2018-01-18 This work is written to provide a qualitative introduction appropriate for a general science audience to the application of pragmagnetic resonance to the determination of biomolecular dynamics The work is also intended as a reference resource for those pursuing or contemplating research in the hydrodynamics The work is also intended as a reference resource for those pursuing or contemplating research in the hydrodynamic characterization of components of Biosystems Thus the Introduction Theory and Methodology sections involve presentations at two levels a pictorial and intuitive presentation for the generalist and a quantitative presentation for the specialist The sections on applications provide a critical discussion of both pure and applied research applications which yields insights into both the capabilities and limitations of the methodology The applications sections are also of interest from the standpoint of the detailed characterization of certain Biosystems such as erythrocytes which have evolved from EPR measurements     Nuclear Magnetic Resonance R K Harris, 2007-10-31 As a spectroscopic method Nuclear Magnetic
