Nelson, 2009-02-17 Over a century ago psychologists who were fascinated with religion began to study and write about it Theologians and religious practitioners have responded to this literature producing a fascinating dialogue that deals with our fundamental understandings about the human person and our place in the world This book provides an introduction to the important conversations that have developed out of these interchanges The dialogue between psychology and religion is difficult to study for a number of reasons First it requires knowledge of both psychology and religion People with a background in psychology often lack a solid understanding of the religious traditions they wish to study and theologians may not be up to date on the latest developments in psychology Second it requires conceptual tools to organize the material and understand the basic problems involved in any attempt to connect the science of psychology with religion These concepts can be found in many places for instance in the writings of philosophers of science but they are complex and often hard to follow for those without a proper theological and philosophical background Finally authors who write on the topic come to the study of psychology and religion from a variety of academic and personal backgrounds This makes for wonderful diversity in conversations but it makes understanding and mastery of the material quite difficult **Research in the Social Scientific Study of Religion, Volume 16** Ralph L.

*Handbook of Adult Development and Learning* Carol Hoare,2006 Adult development and learning have always existed as two separate fields of study with development falling under psychology and learning under education Recent advances in theory research and practice however have made it clear that an important reciprocal relationship exists between them advances in development frequently lead to learning and conversely learning quite often fuels development The synchronicity between development and learning is responsible for positive changes in many capacities including insight intelligence reflective and meta cognition personality expression interpersonal competence and self efficacy This synchronicity is also leading to the growth of a new discipline at the borders of adult development and learning The Handbook of Adult Development and Learning is the first to bring together the leading scholars from both adult development and learning to explore what will form the foundation for this new discipline the latest research at the intersection of these fields It examines six major aspects of their intersection foundations key areas of integration the self system higher reaches of development and learning essential contexts and specific applications An introductory chapter explains why it is so important to recognize and fuel the growth of this new discipline Subsequent chapters review the latest theoretical and empirical literature and provide a rich

**Journal of Geriatric Psychiatry** ,2000 Adult Development Jan D. Sinnott,2014-07-08 Relationships especially close relationships are among the most important aspects of life for most of us Close relationships reach to the very heart of our happiness but exactly what processes or skills over the course of a lifetime help us learn to relate to one another more and more deeply and to grow past the differences and problems that might divide us Adult Development applies the concept of complex postformal thought in order to explore how certain cognitive processes support individuals close relationships such that those relationships grow stronger and richer over time Complex postformal thought allows a person to deal with everyday logical contradictions by letting that person understand that reality and meaning are co created In this way postformal thought enables adults to bridge two contradictory but logical positions and reach an adaptive synthesis of them through a higher order logic Taking this inquiry a step further Sinnott examines the role played by postformal thought in intimate relationships those between spouses partners parents and children siblings and close friends Sinnott argues that postformal thought seems to develop later in life and is somewhat akin to the concept of wisdom Based on 30 years of research this book diverges from typical contributions to this field by discussing positive adult development in the context of close relationships Rather than focusing on the emergence of deficits of adulthood and particularly aging Sinnott instead

explores the cognitive processes that are important in creating and sustaining close ongoing relationships
