Searle, 1992-07-08 In this major new work John Searle launches a formidable attack on current orthodoxies in the philosophy of mind More than anything else he argues it is the neglect of consciousness that results in so much barrenness and sterility in psychology the philosophy of mind and cognitive science there can be no study of mind that leaves out consciousness What is going on in the brain is neurophysiological processes and consciousness and nothing more no rule following no mental information processing or mental models no language of thought and no universal grammar Mental events are themselves features of the brain like liquidity is a feature of water Beginning with a spirited discussion of what's wrong with the philosophy of mind Searle characterizes and refutes the philosophical tradition of materialism But he does not embrace dualism All these isms are mistaken he insists Once you start counting types of substance you are on the wrong track whether you stop at one or two In four chapters that constitute the heart of his argument Searle elaborates a theory of consciousness and its relation to our overall scientific world view and to unconscious mental phenomena He concludes with a criticism of cognitive science and a proposal for an approach to studying the mind that emphasizes the centrality of consciousness to any account of mental functioning In his characteristically direct style punctuated with persuasive examples Searle identifies the very terminology of the field as the main source of truth He observes that it is a mistake to suppose that the ontology of the mental is objective and to suppose that the methodology of a science of the mind must concern itself only with objectively observable behavior that it is also a mistake to suppose that we know of the existence of mental phenomena in others only by observing their

behavior that behavior or causal relations to behavior are not essential to the existence of mental phenomena and that it is inconsistent with what we know about the universe and our place in it to suppose that everything is knowable by us

**My Father's Brain** Sandeep Jauhar, 2023-05-04 A son's journey through his father's dementia. As a cardiologist, Sandeep Jauhar is trained to think logically and dispassionately about medical problems and primed to offer his patients reassurance and solutions. But when his father is diagnosed with Alzheimer's, there are no magic treatments or miracle drugs, only the promise of unstoppable decline. For years, Jauhar watches his father undergo a distressing transformation. Once a prominent research geneticist and author, he now repeats questions over and over, forgets what he has eaten for breakfast, makes baffling financial decisions and turns into a liability behind the wheel. Jauhar investigates the science of dementia and what actually happens in the brain as we age and our memory falters, uncovering the history of Alzheimer's from first discovery to the most cutting-edge research and whether modern treatments offer any hope in a global crisis. A blend of science, history and memoir, *My Father's Brain* is a brutally honest and moving account of how Jauhar and his siblings grappled every day with some of life's toughest questions.

Now we have the World Wide Web, the only thing I know of whose shortened form 'www' takes three times longer to say than what it's short for. Douglas Adams: Not only is there no God, but try getting a plumber on weekends. Woody Allen: Never go to bed mad. Stay up and fight. Phyllis Diller: Having a baby is like getting a tattoo on your face. You really need to be certain it's what you want before you commit. Elizabeth Gilbert: The trouble with having an open mind, of course, is that people will insist on coming along and trying to put things in it. Terry Pratchett: Retreat, hell! We're only attacking in another direction. American general Oliver P. Smith.

**Closer to Consciousness** Alexander Durig, 2023-02-12 In this book, Durig presents a full-blown theory of consciousness. By engaging contemplation of the possibility of two brain hemispheres operating as two brains interacting with one another and aware of one another, he claims that it is our brains existing in a System of Interactive Reflexivity (SIR), perpetually aware of the world and each other's perception of the world, which is the cause of consciousness. He highlights the importance of social interaction for shaping consciousness into meaning, mind, self, language and emotions, as well as noting weaknesses in the current paradigm.

**Key Debates in Anthropology** Tim Ingold, 2003-12-16 Every year, leading social anthropologists meet to debate a motion at the heart of current theoretical developments in their subject, and this book includes the first six of these debates spanning the period from 1988 to 1993. Each debate has four principal speakers: one to propose the motion, another to oppose it, and two seconders. The first debate addresses the disciplinary character of social anthropology: can it be

regarded as a science and if so is it able to establish general propositions about human culture and social life The second examines the concept of society and in the third debate the spotlight is turned on the role of culture in people's perception of their environments The fourth debate focuses on the place of language in the formation of culture The fifth takes up the question of how we view the past in relation to the present Finally in the sixth debate the concern is with the cross cultural applicability of the concept of aesthetics With its unique debate format Key Debates in Anthropology addresses issues that are currently at the top of the theoretical agenda which register the pulse of contemporary thinking in social anthropology It will be of value to students who are not only introduced to the different sides of every argument but are challenged to join in and to develop informed positions of their own
