The Management Of Voice:

Voice Disorders and their Management Margaret Fawcus, 2013-11-11 Since this book was first published four years ago there has been a considerable upsurge of interest in the field of both normal and abnormal voice production. Tangible evidence of this lies in the publication of the Journal of Voice in the United States and in the UK the formation of the British Voice Association. This organization has attracted an increasing membership from professionals involved in all aspects of voice care and use: actors and singers, laryngologists and speech therapists, teachers and phoneticians. The Association holds regular study days, holds an annual two day symposium and publishes a Newsletter which attracts entries from this broad spectrum of professionals. We have also seen an increase in the number of specialist voice clinics and in the two final chapters in this book a contrast is presented between such a specialist setting and the more typical clinic that operates in the majority of general hospitals. This last chapter now contains a breakdown of voice referrals over an eight year period which must represent a unique published study in this country. There still remains however little research into the management of voice disorders. There is clearly a need for more efficacy studies into specific treatment methods and the single case study designs developed in the field of aphasia would seem to be appropriate here. *The Management of Voice Disorders* M. D. Morrison, Hamish Nichol, Linda Rammage, 2013-11-11 There has been a tremendous growth of interest in the human voice and its disorders during the past decade. This has led to the development of a variety of voice labs or voice clinics that are able to offer unique interdisciplinary assessment and treatment facilities. To cover all the bases the voice care team requires input from laryngology, speech language pathology, psychiatry, neurology, voice science, music pedagogy, biomedical engineering and other peripheral fields. Because of the multidisciplinary nature of voice clinics there have been a number of books written that address our subject from different professional perspectives. These tend to be multi-authored works that draw on expertise from around the world such as a laryngologist from New York, a speech pathologist from Toronto etc. All are colleagues that share similar interests but never actually share the management problems of the same patients. This book has been planned and written by the members of a single voice clinic. It is our hope that it will reflect a singleness of direction and purpose in the way it presents our approach to a complex topic. Because of our regular interactive meetings over problem patients in which we debate the meaning of our observations, the evolution of etiological classification systems and the rationale for particular therapy approaches we feel that we have become a team that is greater than the sum of its parts and that there is value in sharing our cumulative thoughts with others. This is not simply a laryngology text for laryngologists.
