Jha, Sushil K. Jha, 2020-10-31 This book discusses the evolution of sleep and its possible function in the higher invertebrates and vertebrates including humans It describes the current concept of sleep and its functions based on research on the mammalian system To date electrophysiological recordings of the brain waves muscle activity and eye movements are the only tools available for characterizing the sleep architecture in the majority of animals In mammals and birds only two distinct types of sleep are found non rapid eye movement NREM and rapid eye movement REM sleep Since the discovery of REM sleep studies have been performed to understand the purpose of the two distinct sleep states in higher vertebrates birds and mammals and how REM sleep was evolved The book summarizes the role of both REM and NREM sleep in the proper functioning of the brain and body It covers various aspects of the role of sleep in important physiological processes including memory consolidation induction of synaptic plasticity energy restoration enhancing immune response and maturation of neuronal circuitries during early life Lastly the book reviews the effects of chronic acute sleep deprivation on memory consolidation obesity and the immune system in animal models and humans **Birds** Irving J. Goodman, Martin W. Schein, 2013-10-22 Birds Brain and Behavior is a collection of papers that discusses brain behaviors problems concentrating on the bird's complex and well integrated central nervous system This collection reviews the theoretical and methodological problems concerning comparative studies of bird behavior in a brain behavior relationship The book explains the structural organization of the avian brain including the spinal cord and the general ascending descending patterns of

sensory projections One paper analyzes the hearing and vocalization in songbirds that are composed of the auditory mechanisms as well as the vocalization and audition systems A study by Falls 1963 notes that songbirds use more than one type of auditory cue for species recognition Another paper present brain stimulation parameters that affect bird vocalization Other papers examine the neural basis of avian discrimination and reversal learning memory disruptions by brain perturbation and the behavioral and physiological correlations between the sleep and awake states This book will prove useful for avian biologists zoologists and readers who have a general interest in birds

Sherony, Randi Minetor, 2024-02-07 From the discovery of the fossil *Archaeopteryx* to more than 10 000 different documented species today birds have become the second most diversified class of vertebrates on Earth Birds have evolved extensively since they first emerged in prehistoric times but that diversity could dwindle and even vanish unless we take steps to conserve their habitats ensuring that they sustain their numbers and their variety This natural history of birds starts in the distant past going back to the Jurassic Cretaceous and Paleogene periods in order to get a broader understanding of the birds that we see today Chapters cover their lives breeding flight migration and more while also highlighting some especially unique bird fossils such as the *Pelagornis Sandersi* which had a wingspan of more than 20 feet Also included are chapters on the loss of needed habitats the current decline of native birds and what can be done to reverse it      **Video Surveillance of Nesting Birds** Christine Ann Ribic, 2012-05-13 Until recently inferring identities of predators and monitoring cryptic behaviors at the nest was time consuming often with anecdotal results No more Video nest surveillance so aptly revealed in this volume has ushered in a new era of data collection that allows field workers to link environmental factors with such aspects as the temporal dynamics of predator communities in relation to what the birds are doing at their nests thus removing much of the guesswork of earlier studies Spencer G Sealy University of Manitoba *Video Surveillance of Nesting Birds* shatters earlier beliefs about how birds interact with nest predators Much of what we thought we knew about nesting and its hazards was flat out wrong as authors in this book discovered by using modern technology in the field As simple as we would like our models of animal behavior to be this book shows that reality is far more complex and nuanced Douglas H Johnson University of Minnesota      **Handbook of Sleep Research**, 2019-06-21 *Handbook of Sleep Research* Volume 30 provides a comprehensive review of the current status of the neuroscience of sleep research It begins with an overview of the neural hormonal and genetic mechanisms of sleep and

wake regulation before outlining the various proposed functions of sleep and the role it plays in plasticity and in learning and memory Finally the book discusses disorders of sleep and waking covering both lifestyle factors that cause disrupted sleep and psychiatric and neurological conditions that contribute to disorders Emphasizes a comparative and multidisciplinary approach to the topic of sleep Covers the neurobiology and physiology of sleep stages mechanisms of waking and dreaming Discusses in detail the proposed functions of sleep from health and rest to memory consolidation and synaptic plasticity Examines the current state of research in mammalian and non mammalian species ranging from primates to invertebrates
